

CETA 106

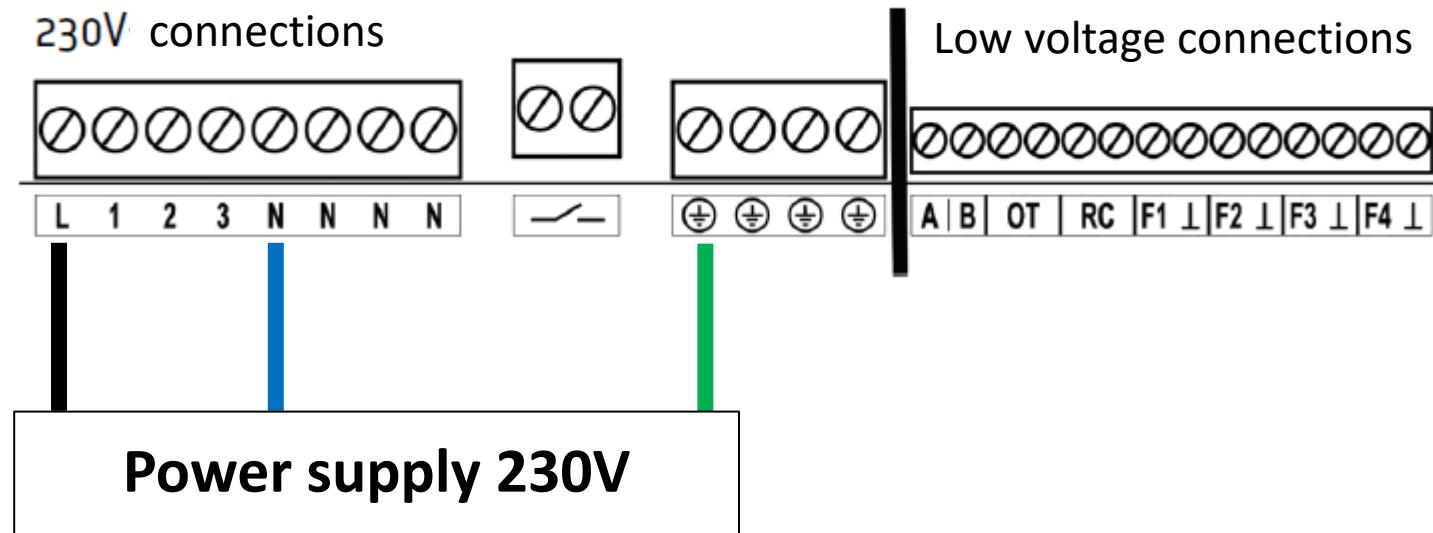

Heating circuit control

Connections

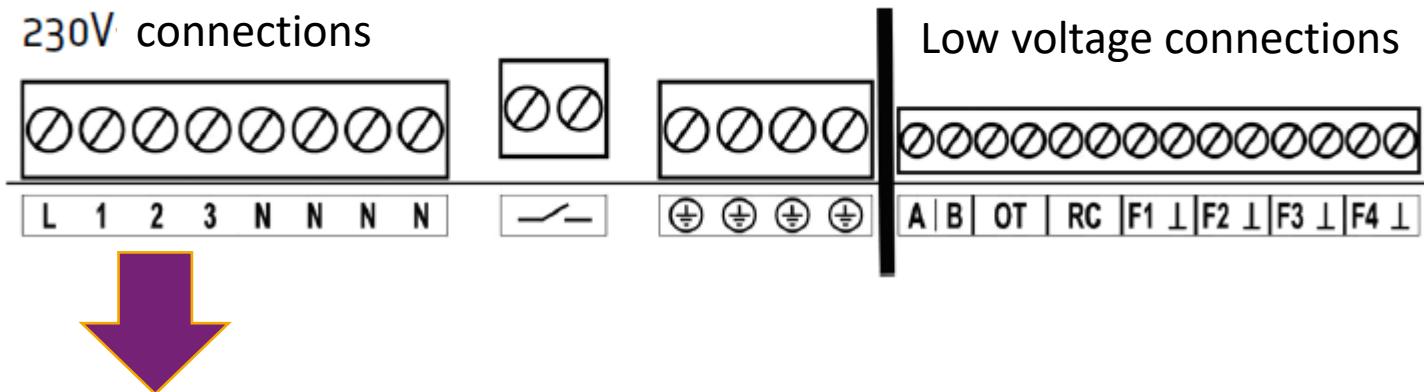

Control system CETA

Device connection

Control system CETA

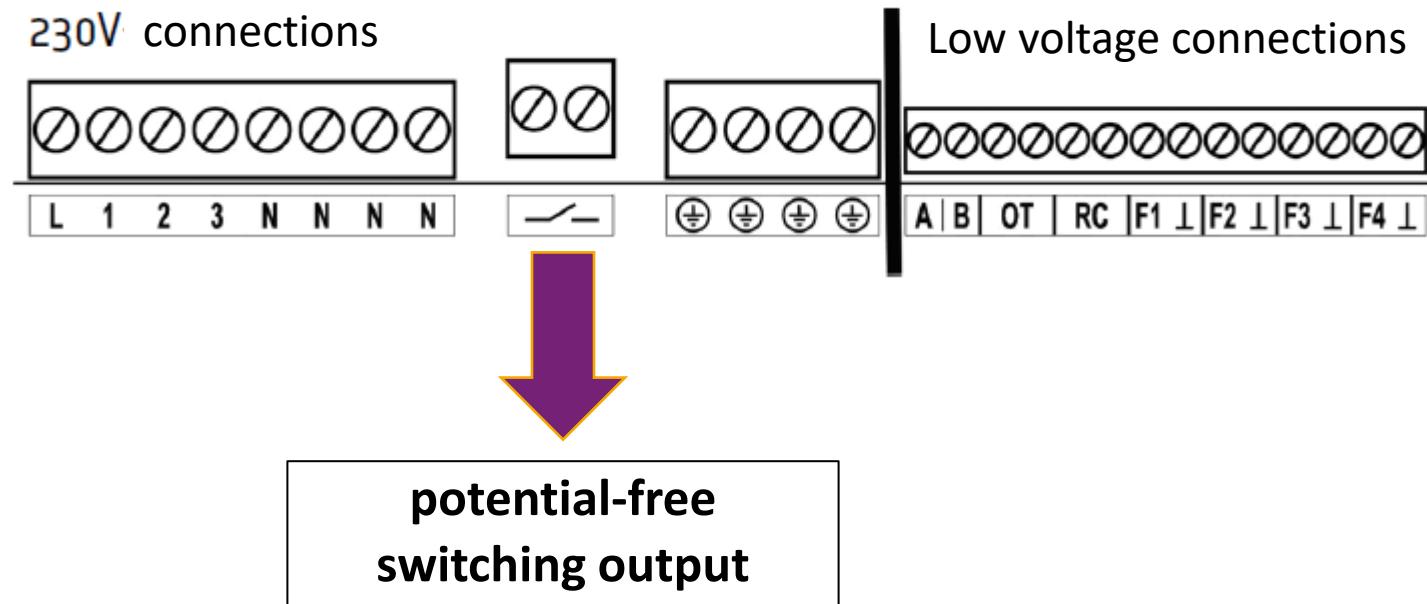

Device connection

**1/2/3
L1 (Switching output)**

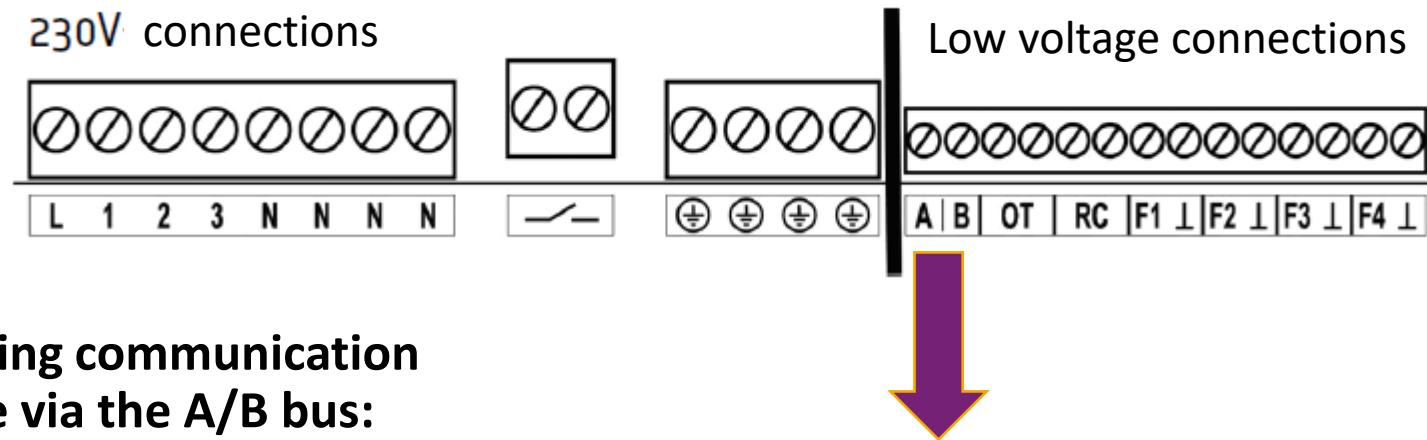

Control system CETA

Device connection

Control system CETA

Device connection

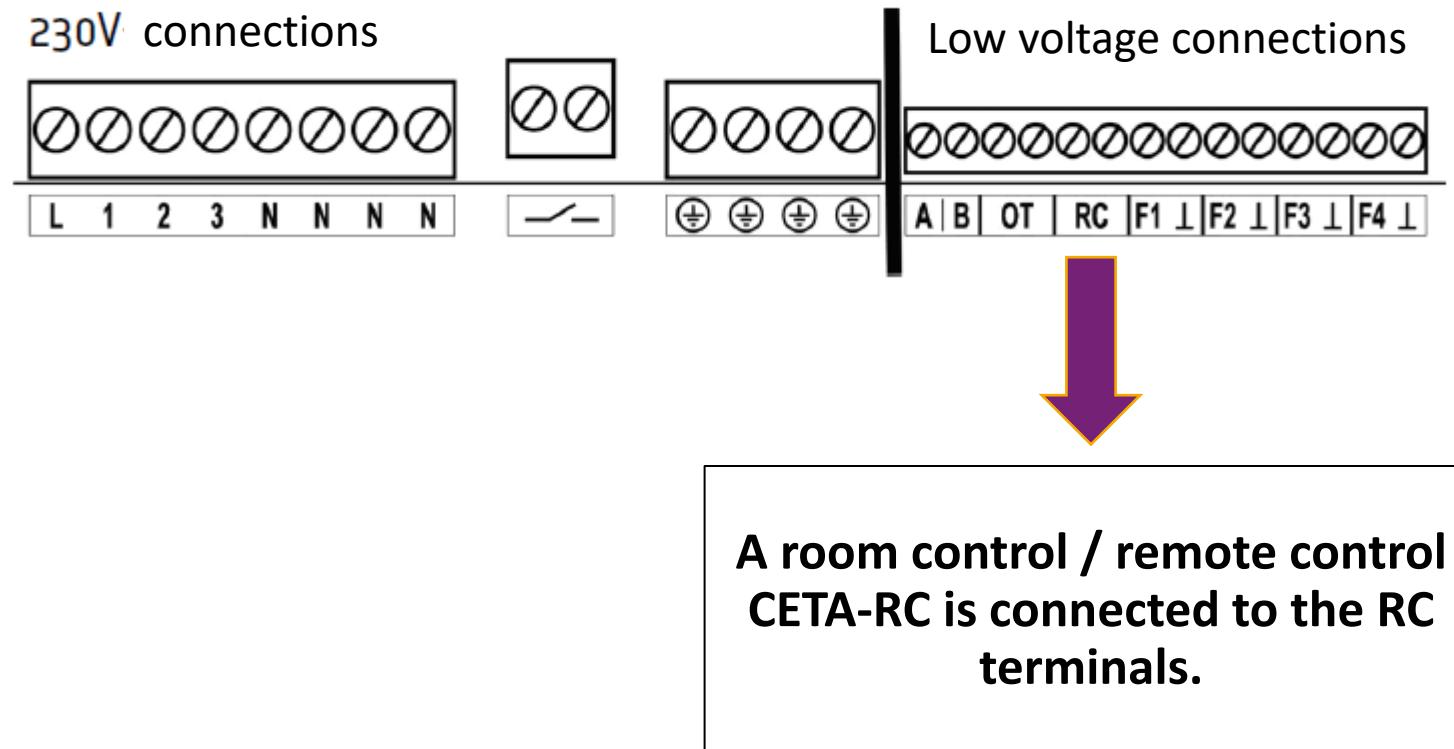

The following communication takes place via the A/B bus:

- Outdoor sensor value
- Burner blocking
- Start protection
- Buffer priority

**CETA-Bus A/B
for connection
with further CETA devices
(not CETA RC)**

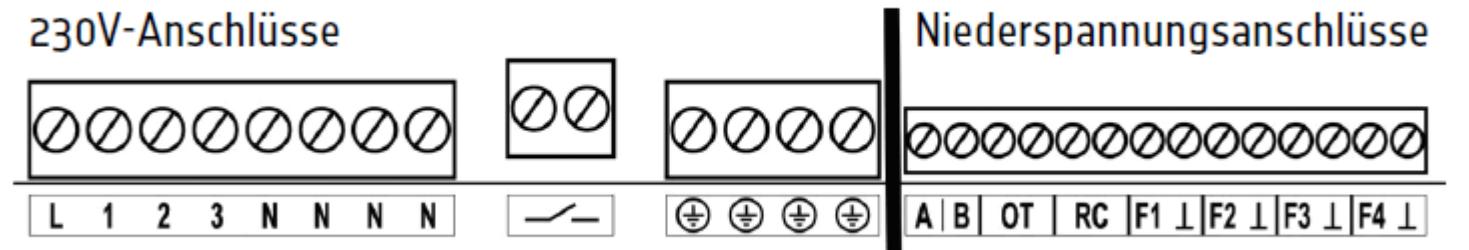

Control system CETA

Device connection

Control system CETA

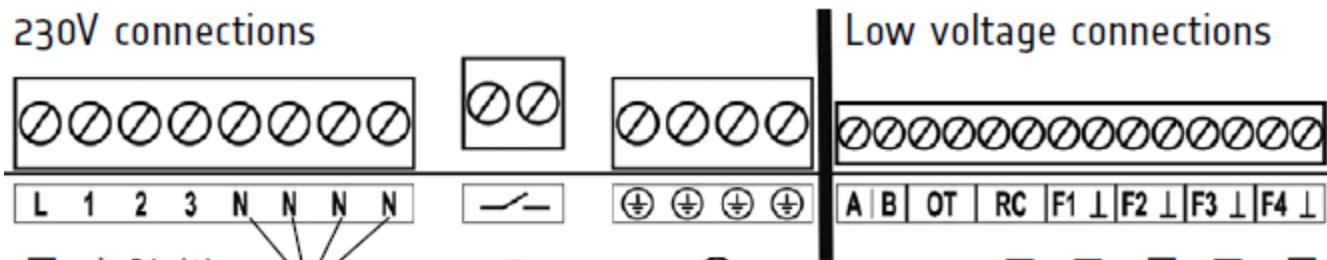

Device connection

Sensor connection F1/F2/F3/F4

Control system CETA

Device connection

\oplus =Ground connection

Connection solar charging pump SOP (isolated), (option)

Bus connections for networking (see parameter 03:03)

Connections without function

F4=Sensor outside temperature (AF200)

F3=Sensor heat supplier Delta-T (PT1000), (option)

F2=Sensor flow heating circuit (VF202B)

F1=Sensor heat storage tank Delta-T (KVT20), (option)

RC=Connection CETA RC, (option)

- 3=L1 (230V) Mixing valve CLOSED
- 2=L1 (230V) Mixing valve OPEN
- 1=L1 (230V) Pump for mixed heating circuit (MCP)
- L=Phase 230V mains
