1 Update 2.2.40160, Relay V2.2 Rev. 29 from 27.07.2022

Update available for :

heatapp ! base	heatapp ! base T2B	heatapp ! gateway
heatcon! EC 1351	heatcon! EC 1321	heatapp ! Central

2 All devices

- Revision of the language database

3 heatcon! EC

- Bugfixing USB parameterisation for OEM customers
- Bugfixing cascade setting

4 Safety instructions

It is always advisable to make a data backup **before** updating. To do this, select "Settings > System > System management" in the app and create a data backup on a USB memory stick that is plugged into heatcon! EC/heatapp! base/heatapp! base T2B

Note: A data backup of the heatapp! gateway is not possible.

After the data backup, carry out the updates. Do **not disconnect the power supply of the units during the update**. Depending on the size of the system and the speed of the Internet connection, the updates can take up to 20 minutes and are only completed when the LED(s) light up dark green again.

5 Update path for manual call

Settings > System > System Management

We wish you a lot of fun with your system.
