

## heatapp! in new buildings

Especially for new buildings there are possibilities to install heatapp!

Often the energy generator can be selected together with the client, so that a connection possibility for heatapp! exists. This offers the best possible energy efficiency. Networks are also often available everywhere in new buildings, so that you don't have to lay any cables to connect the heatapp! base in the boiler room to the network.

Take your chance and make sure that your customer saves energy from the first day in his new home and can enjoy the feel-good factor of heatapp!
