

**heat  
con!**

**heatcon! EC**

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

# heatcon! Installation

The installation, as far as the connection of the inputs and outputs is concerned, can be carried out in advance if the assignment is planned according to the available hydraulics.

But the connection can also be made after completing the setup wizard and possibly further configuration afterwards.

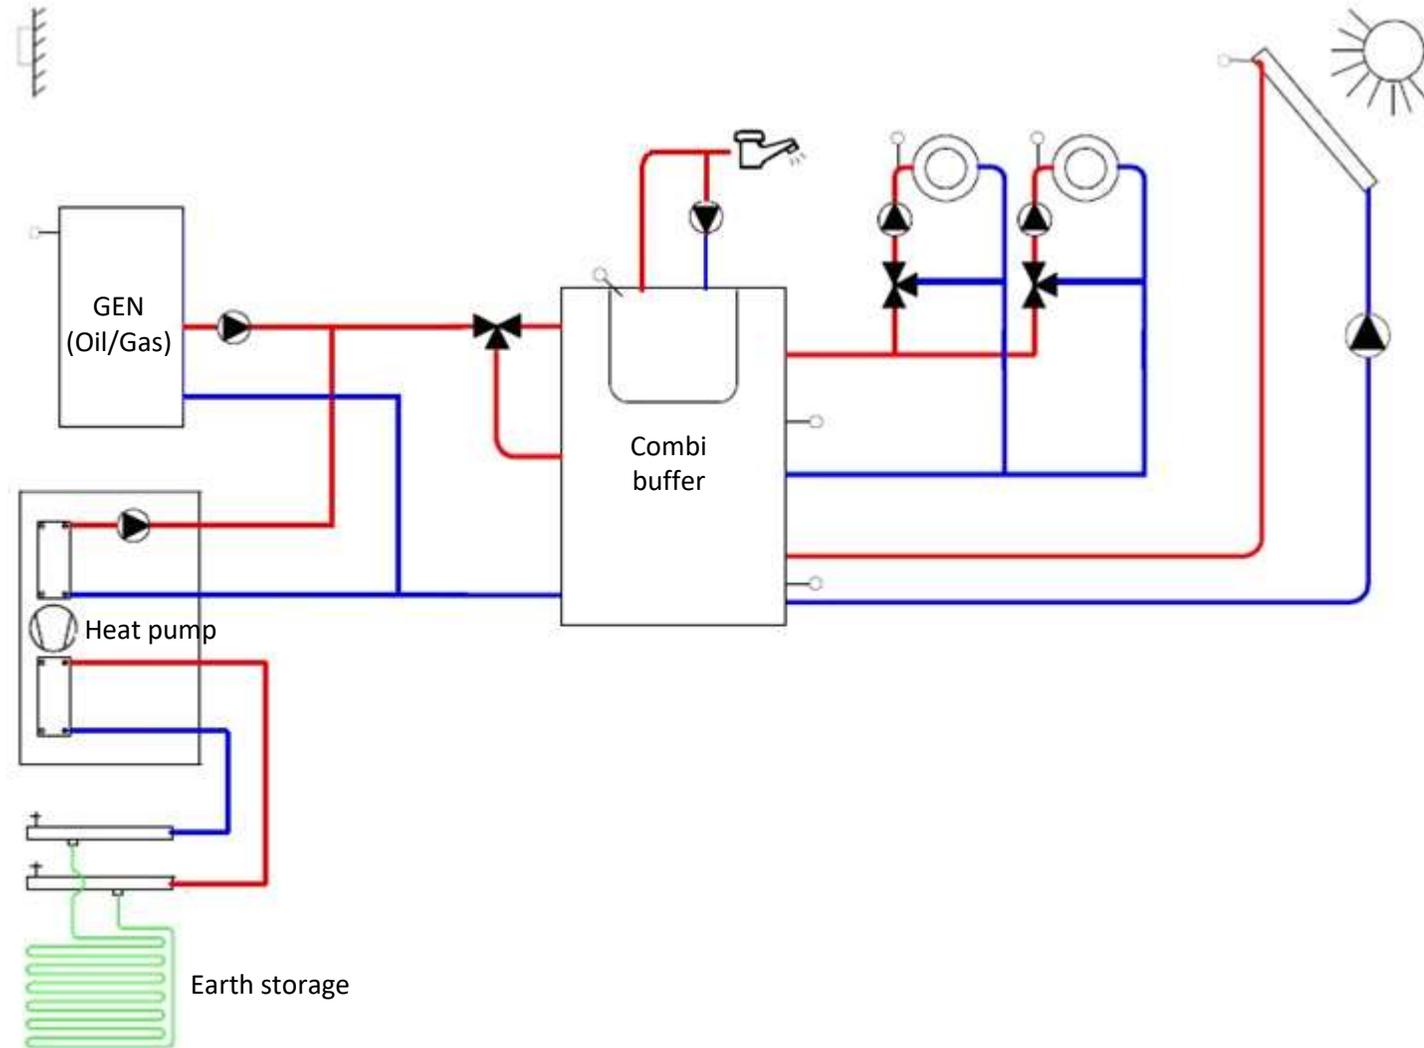

# heatcon! Setup wizard via MMI 200

Navigation on the MMI is done by turning and pressing.

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

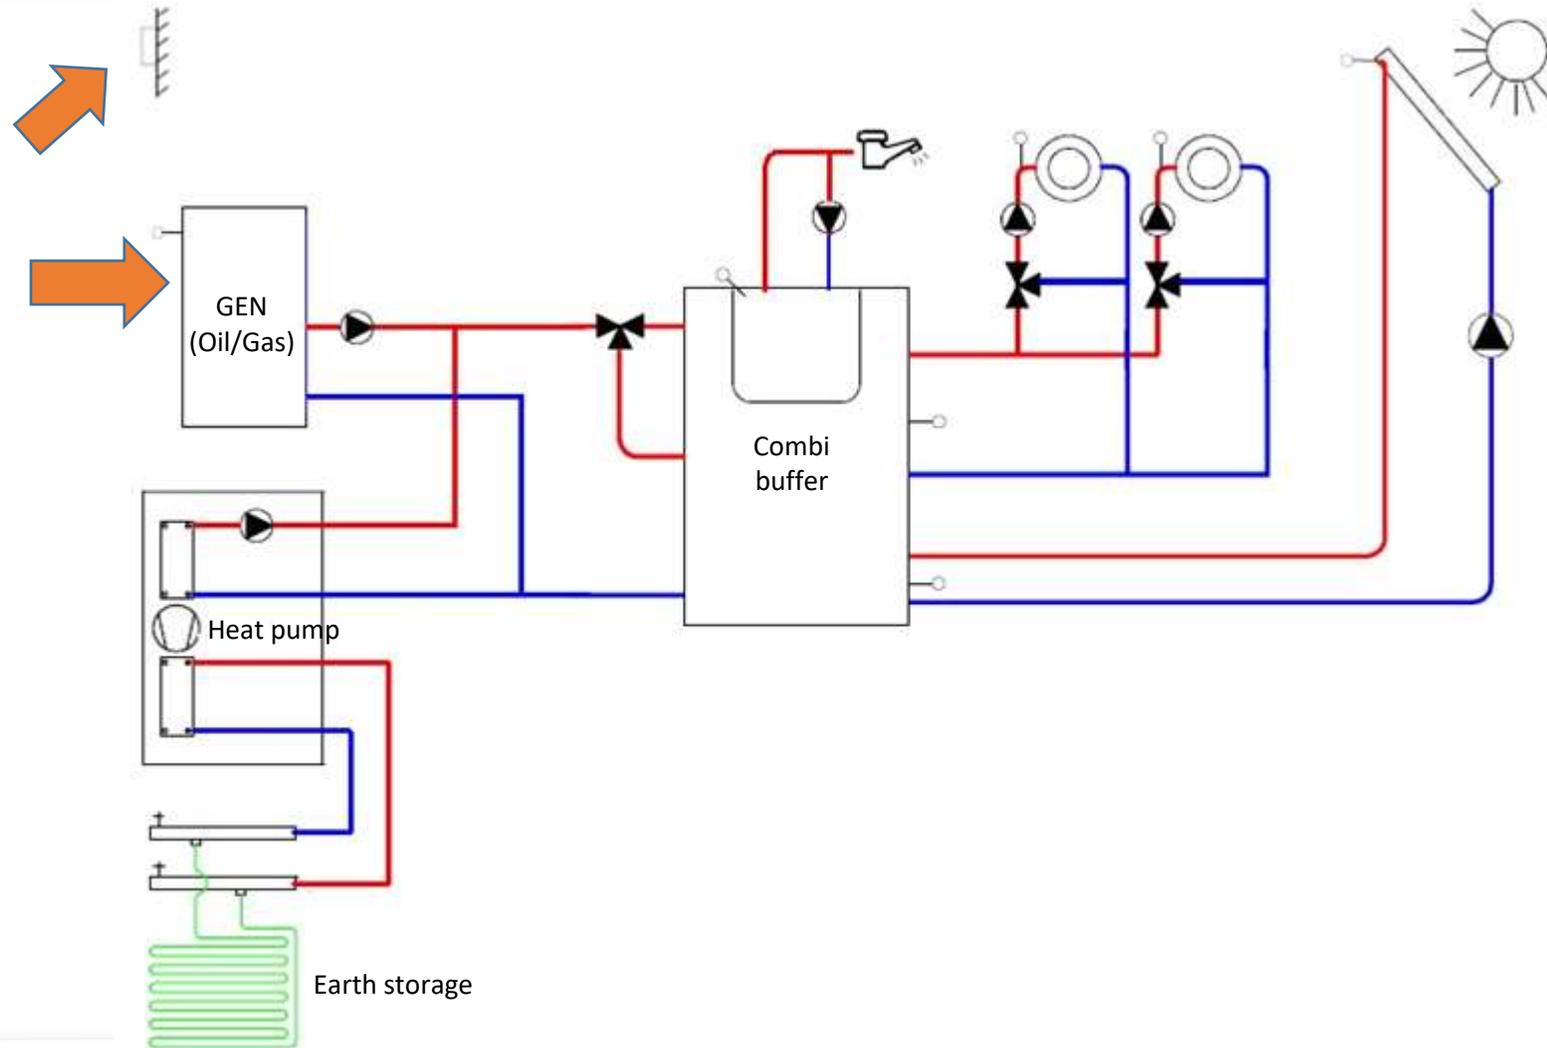

Setup wizard

Step 2:  
Energy generator 1  
Function  
single-stage burner

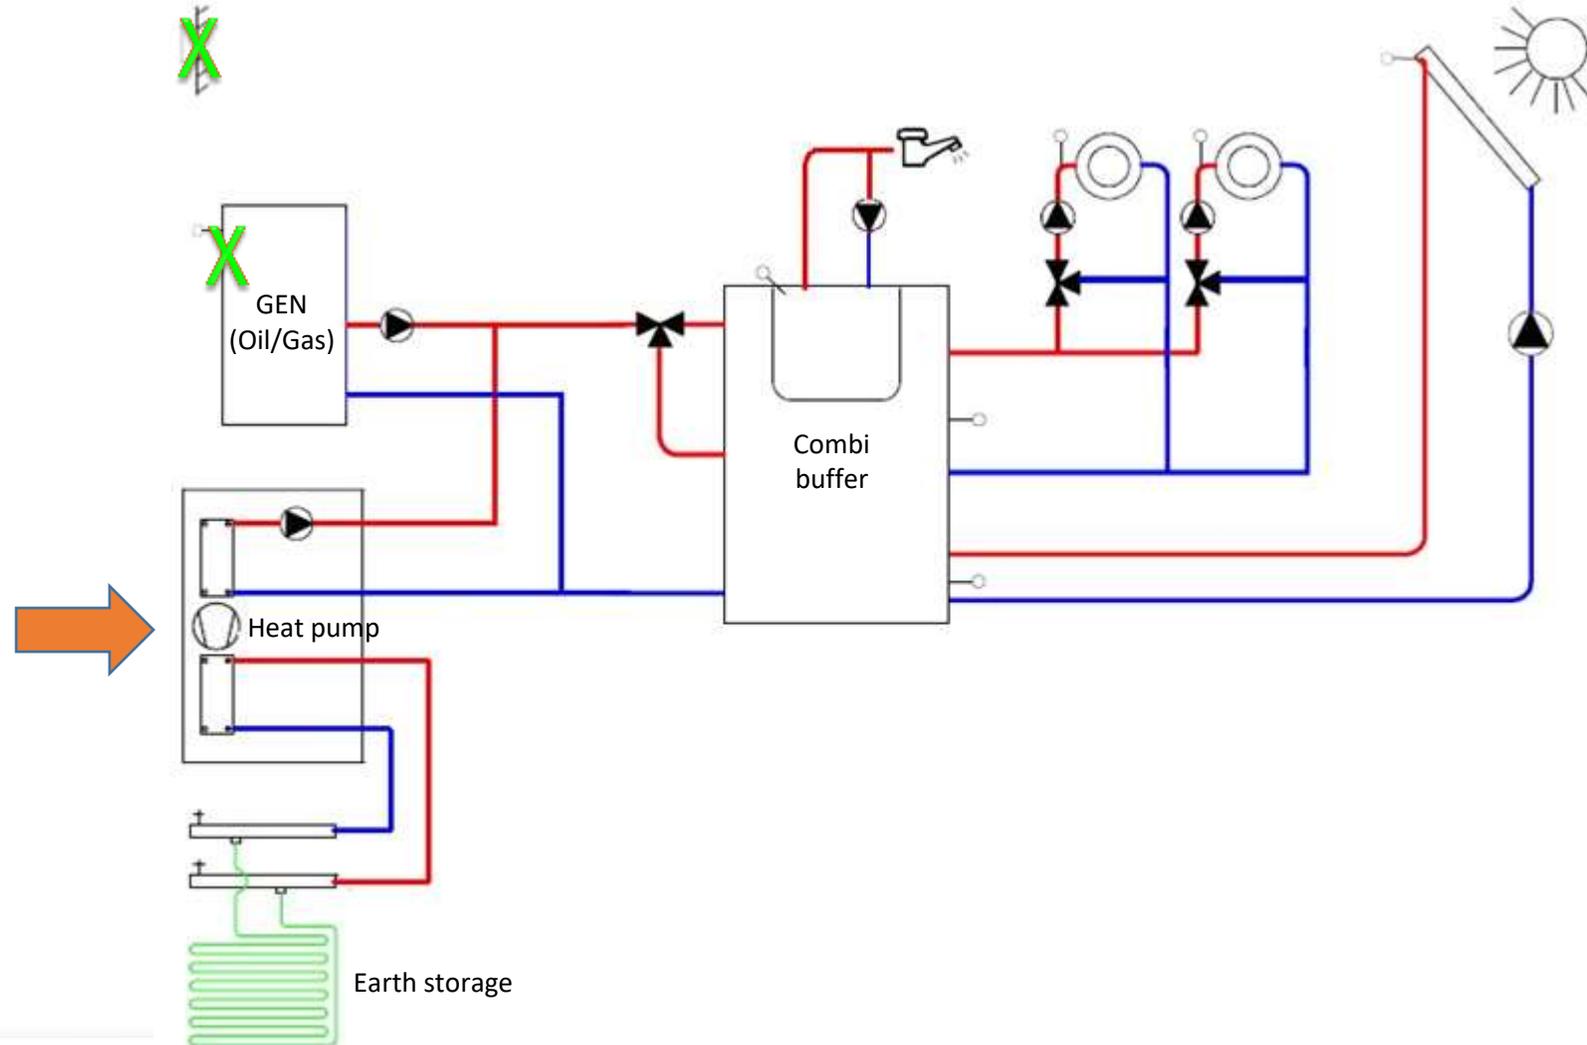

Connection  
E5:EFI WF  
E4:EFI AF  
A1:ARSP-BR1

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Setup wizard  
Hydraulics  
Step 3:  
Energy generator 2  
Function  
single-stage burner

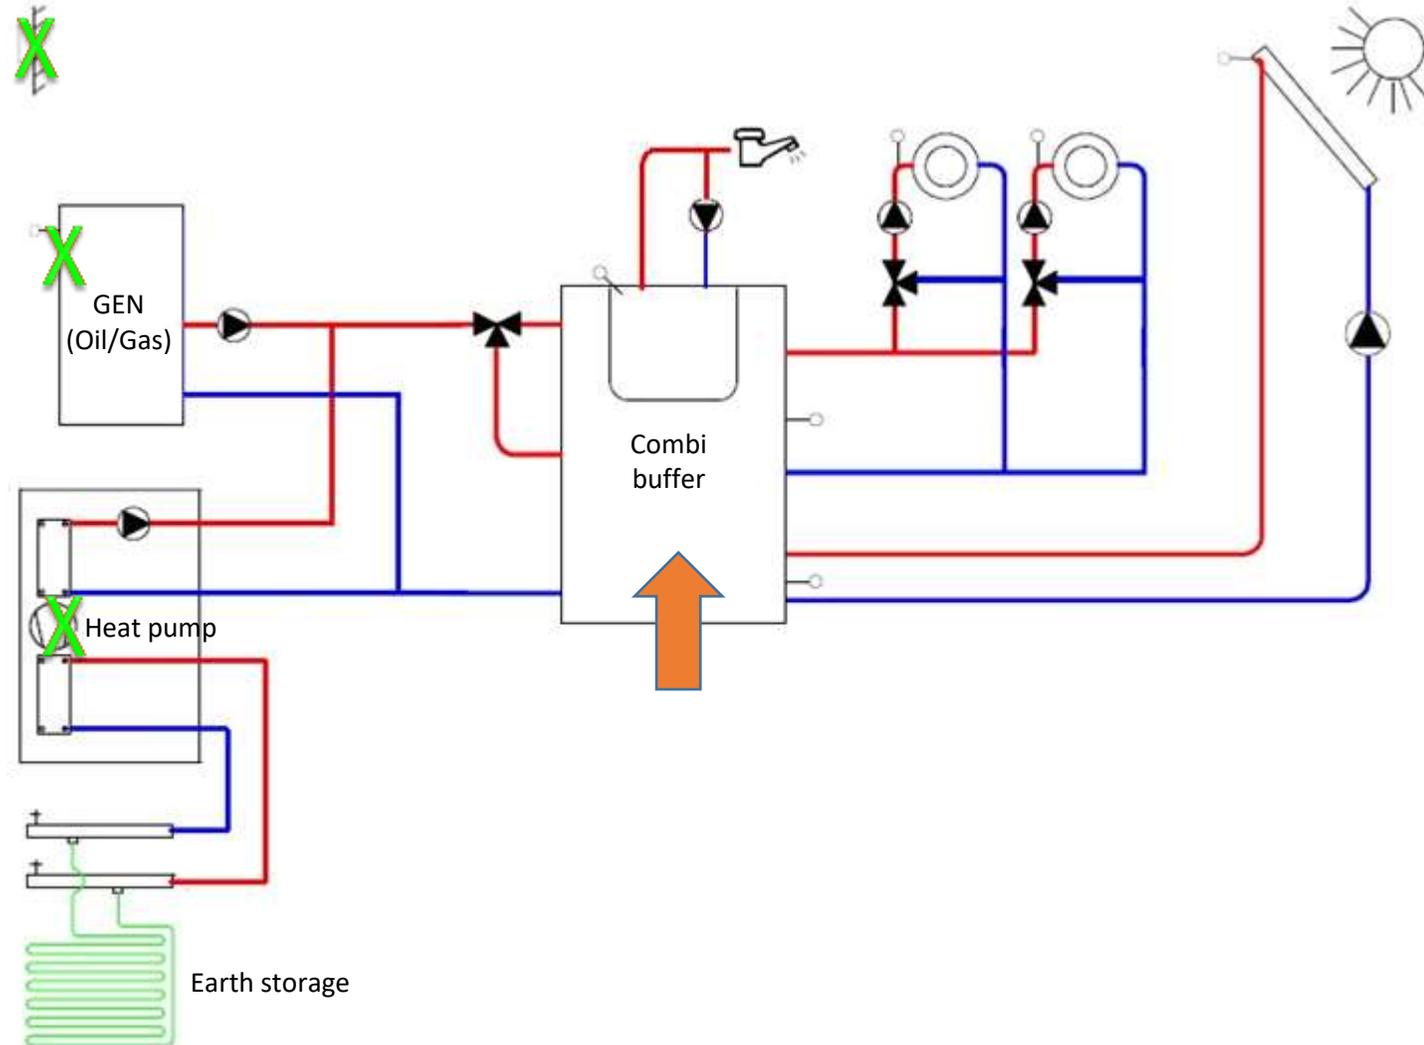

Connection  
E13:EF110V (WF2)  
A2:ARSP-BR2

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Setup wizard  
Hydraulics  
Step 4:  
Heating buffer  
Function  
**Charge control**

Connection  
E11:EFI (PF1)  
A19:ARS-HPP  
Not needed

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Setup wizard

Hydraulics

Step 5:

Hot water mode

Function

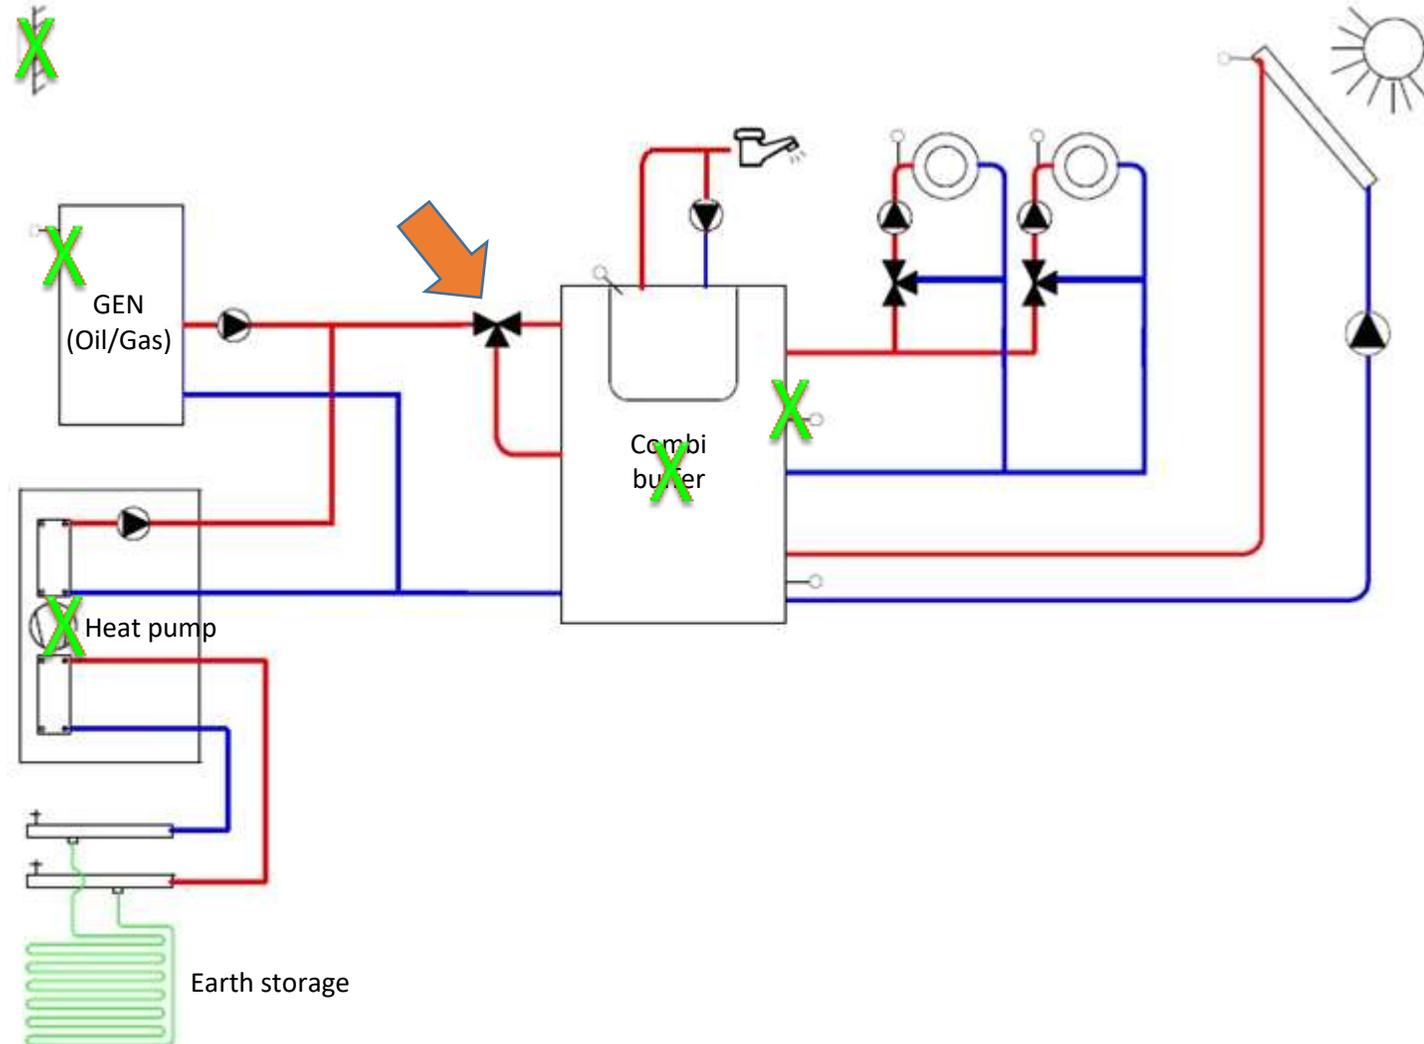

**Storage tank  
charging pump**

Connection

E6:EF11 (SF)

A5:ARS (SLP)

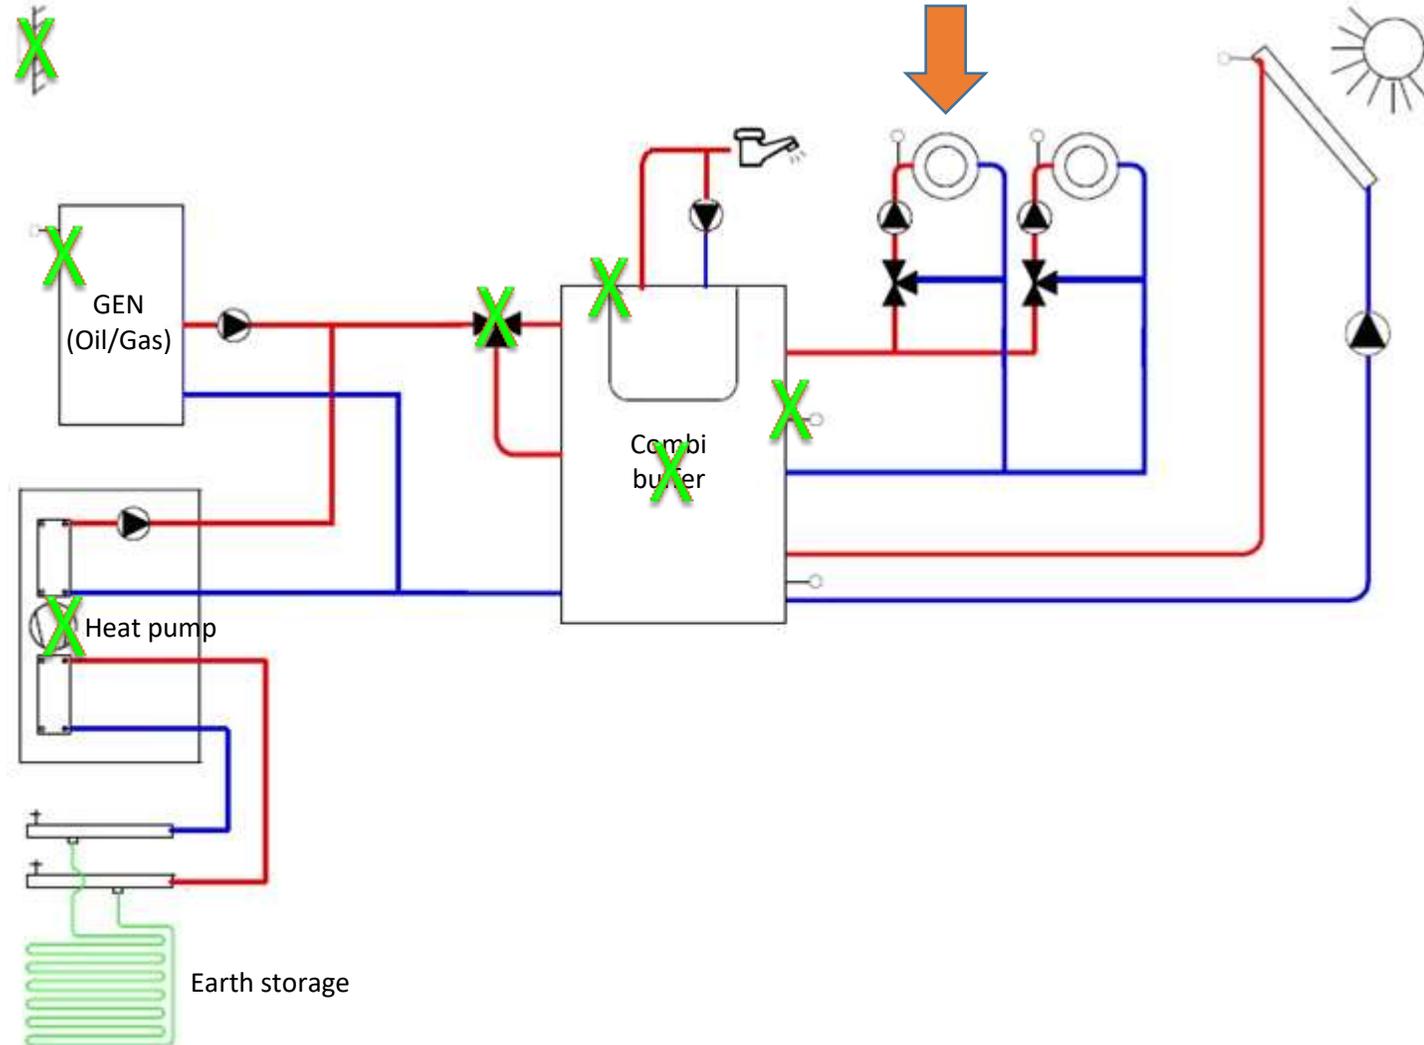

The diverter valve  
will be made via storage pump  
controlled.

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Setup wizard  
Hydraulics  
Step 6:  
Heating circuit 1  
Function  
Mixing circuit

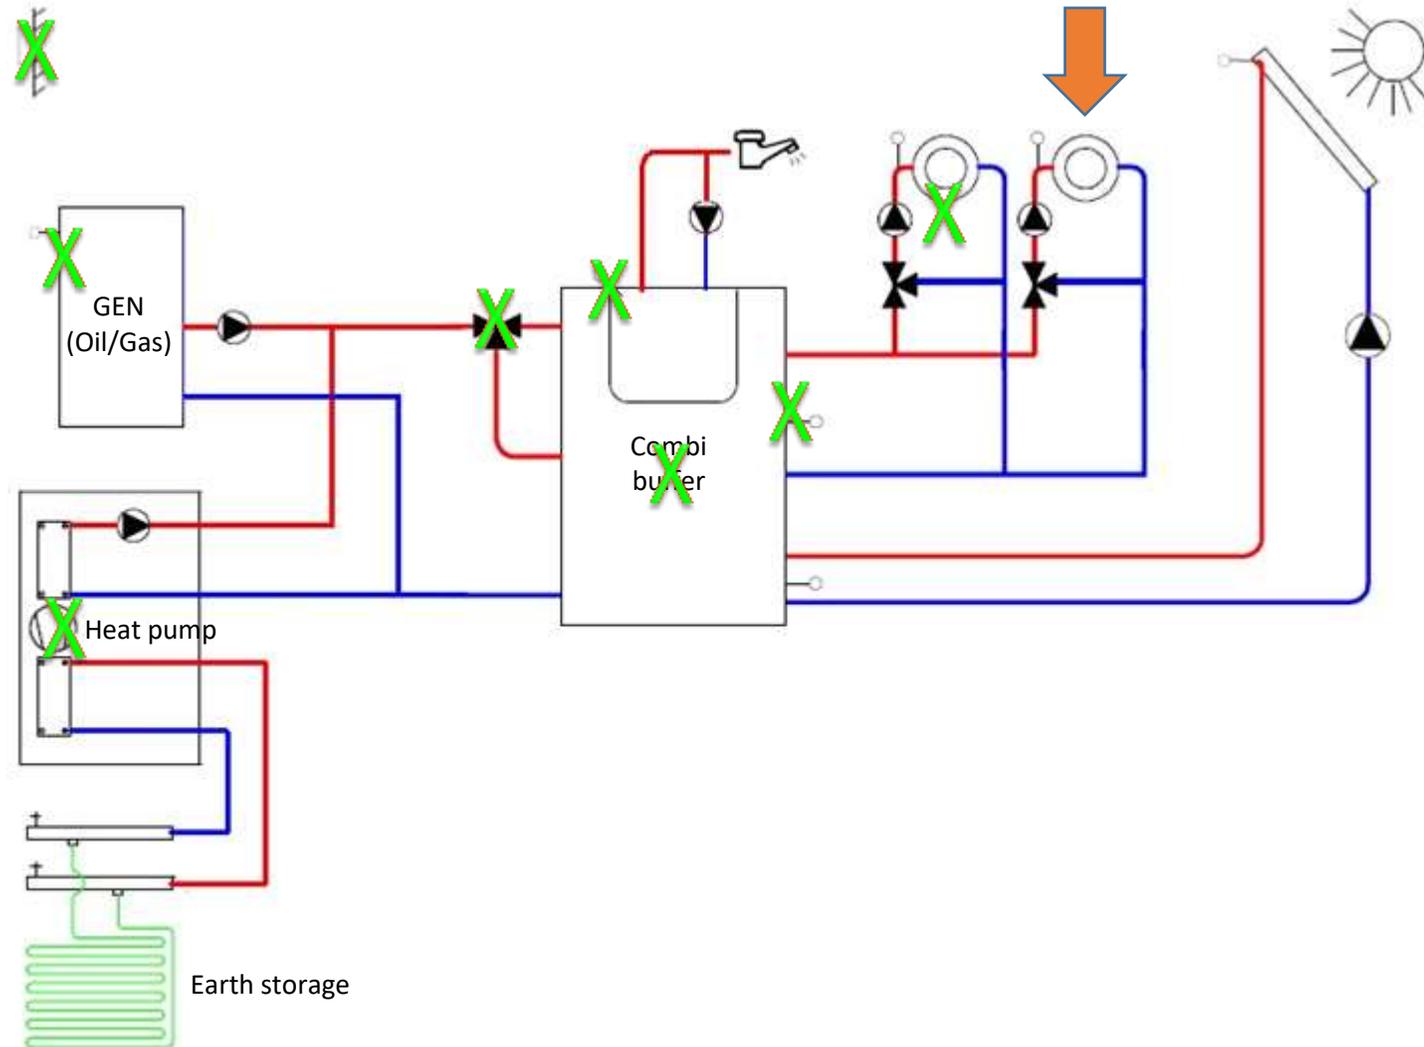

Connection  
E7:EF11 (VF1)  
A6:ARS (HK1 AUF)  
A7:ARS (HK1 ZU )  
A8:ARS (HK1 P)

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

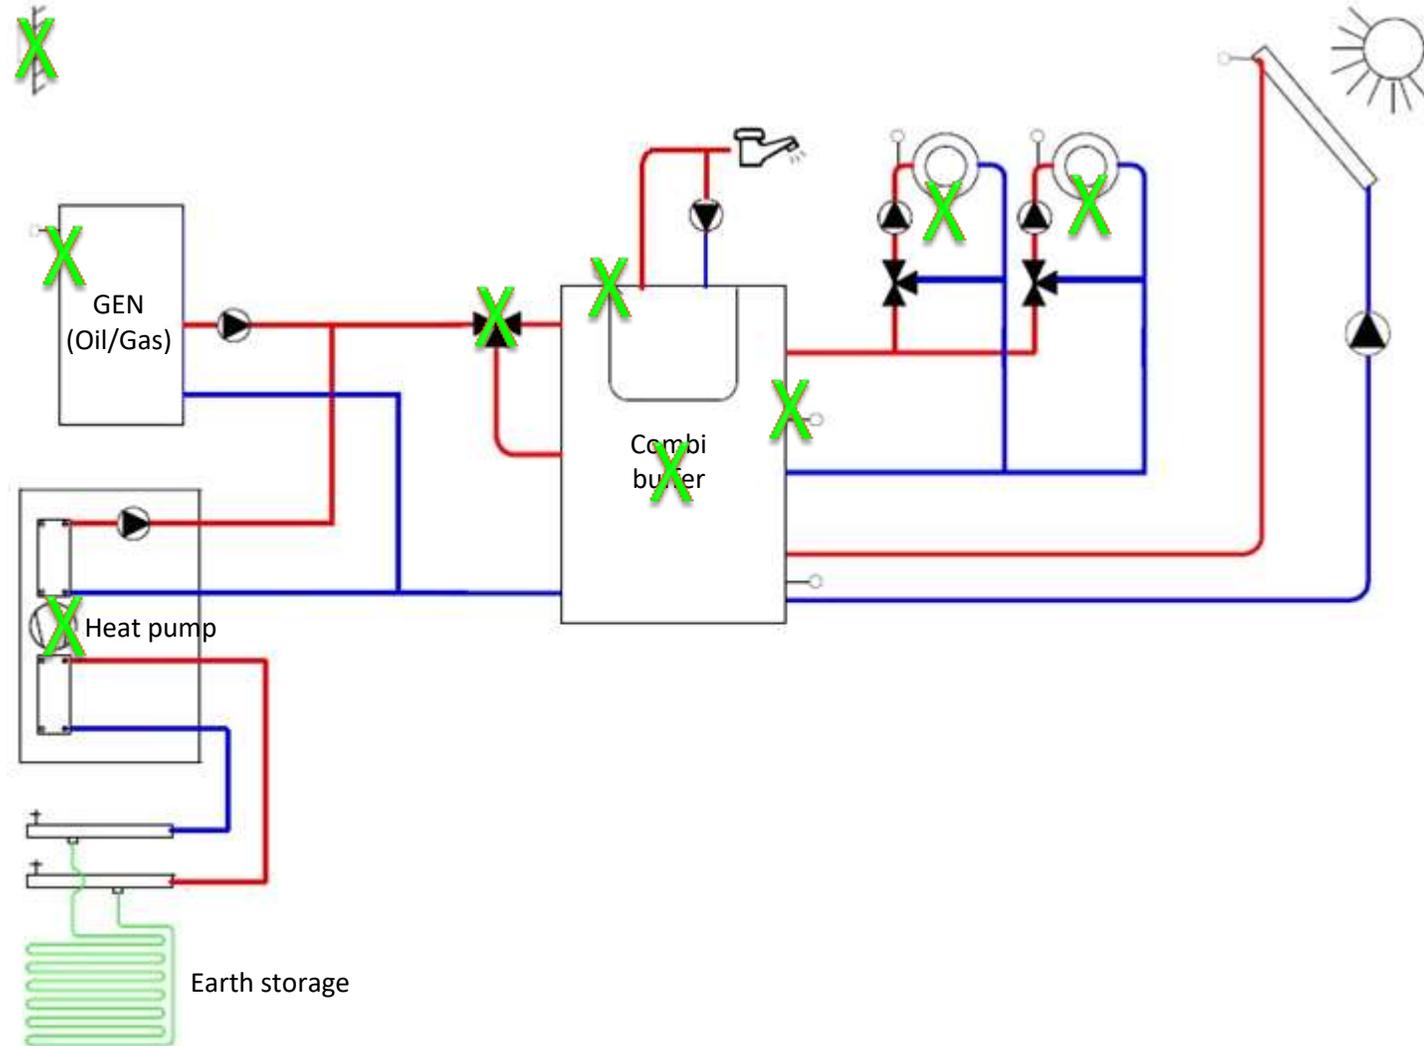

Setup wizard  
Hydraulics  
Step 7:  
Heating circuit 2  
Function  
Mixing circuit

Connection  
E8:EFI (VF2)  
A11:ARS (HK2 AUF)  
A12:ARS (HK2 ZU)  
A13:ARS (HK2 P)

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

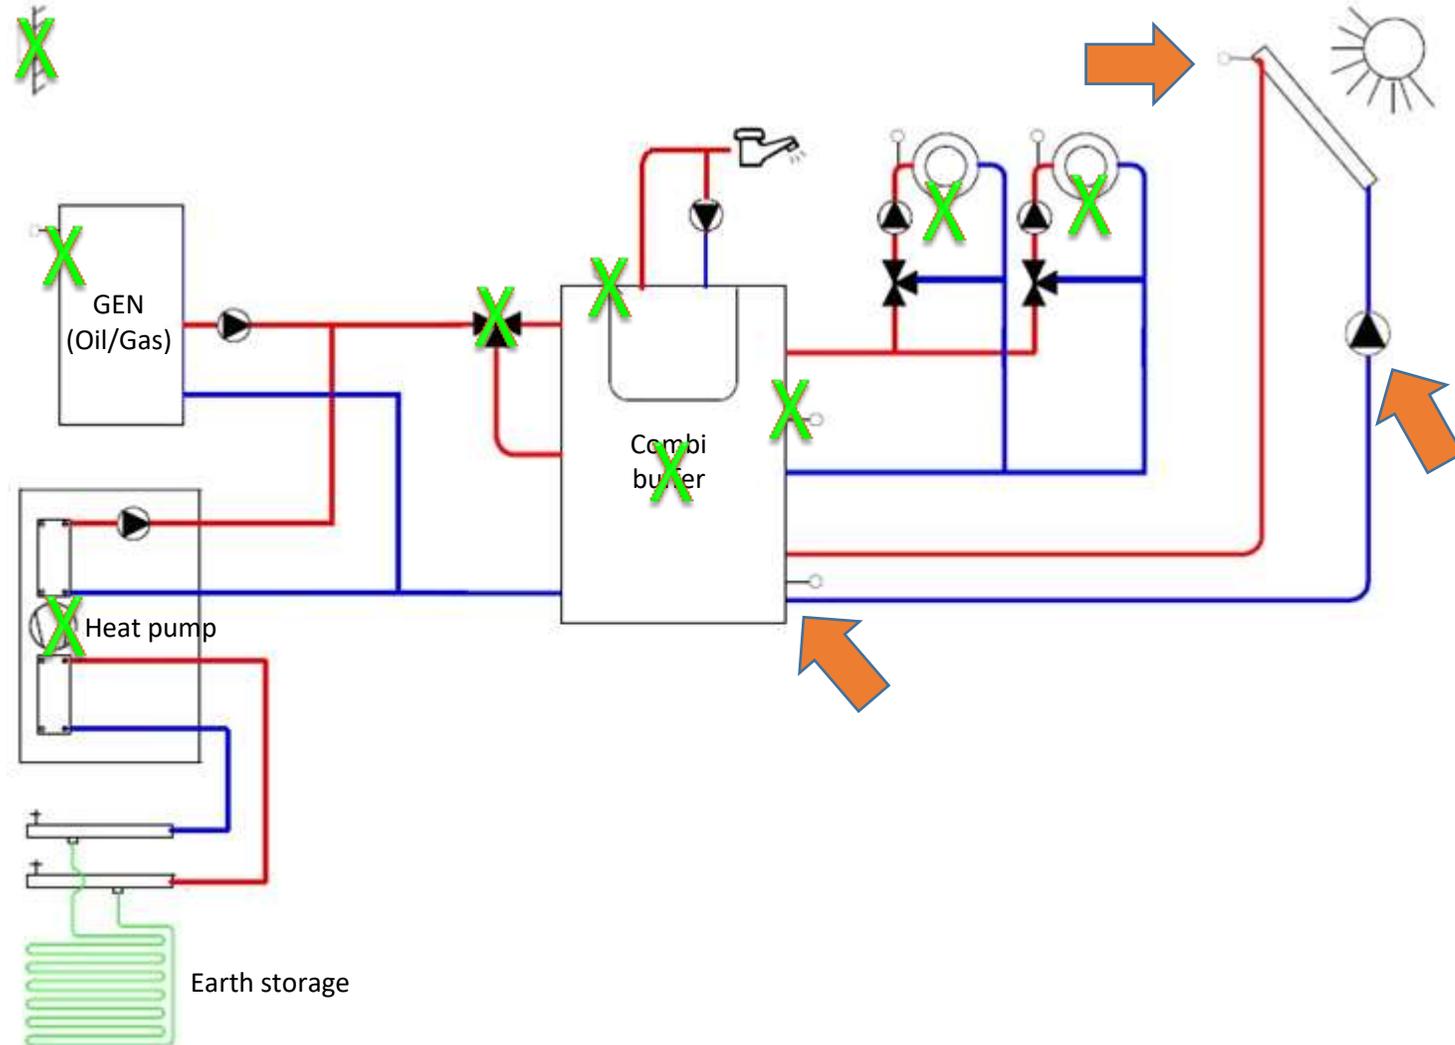

Setup wizard  
Hydraulics  
Step 8:  
Heating circuit 3  
Function  
**OFF**

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Setup wizard  
Hydraulics  
Step 9:  
Differential control 1  
Function  
**Solar**

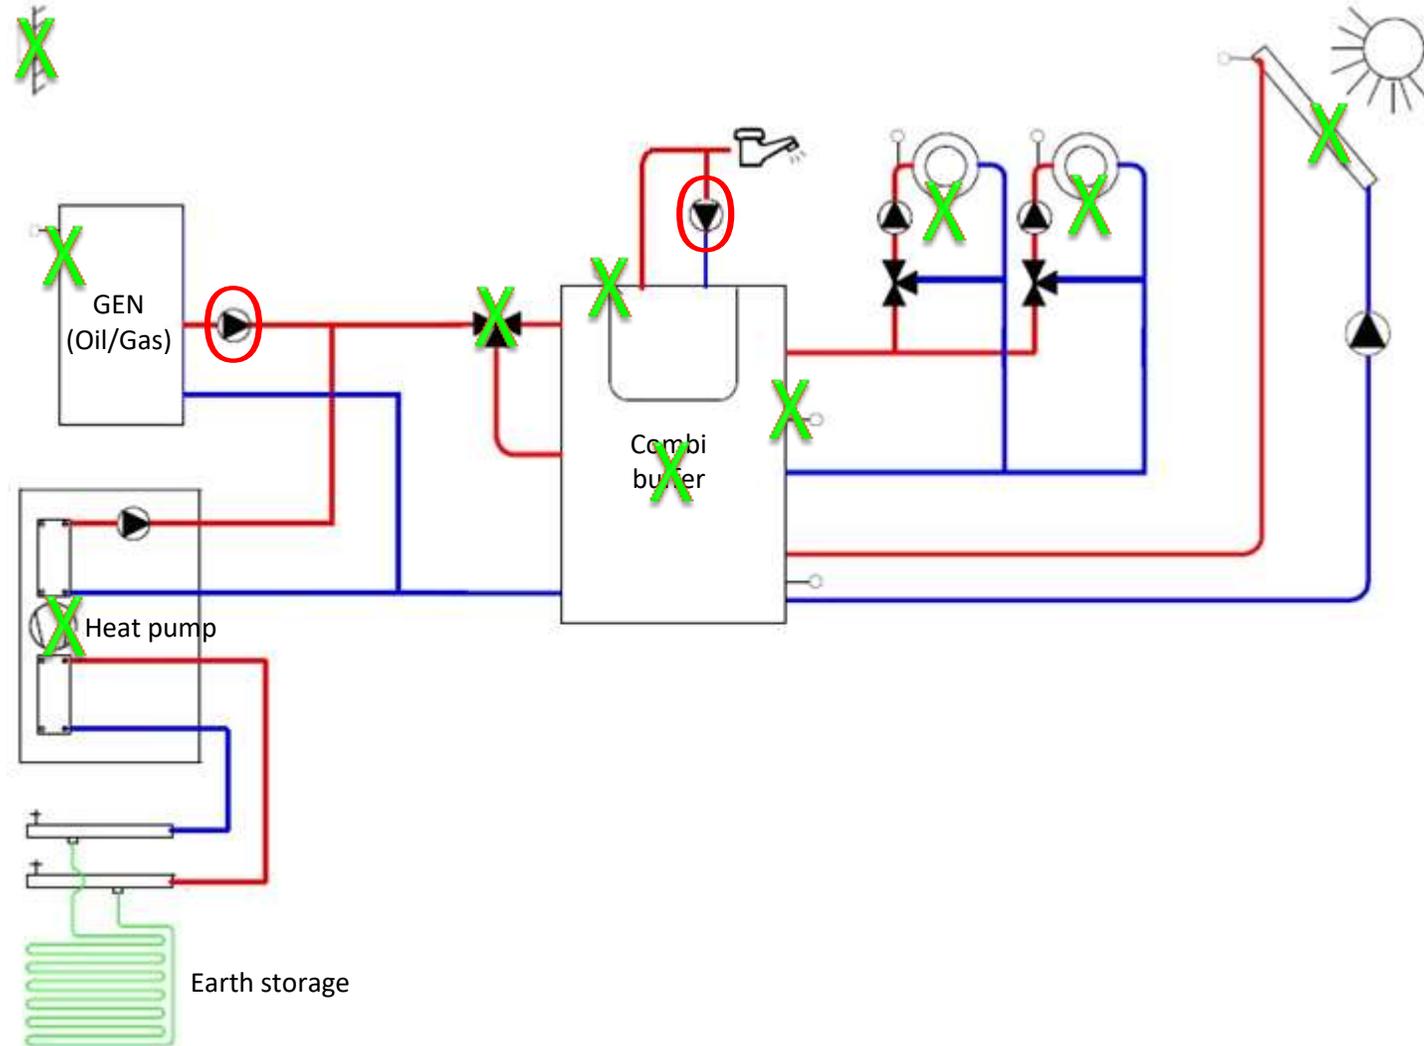

Connection  
E9:EFI (DIF1 VF)  
E10:EFI (DIF1 PF)  
A9:ARS (DIF1 SOP)

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

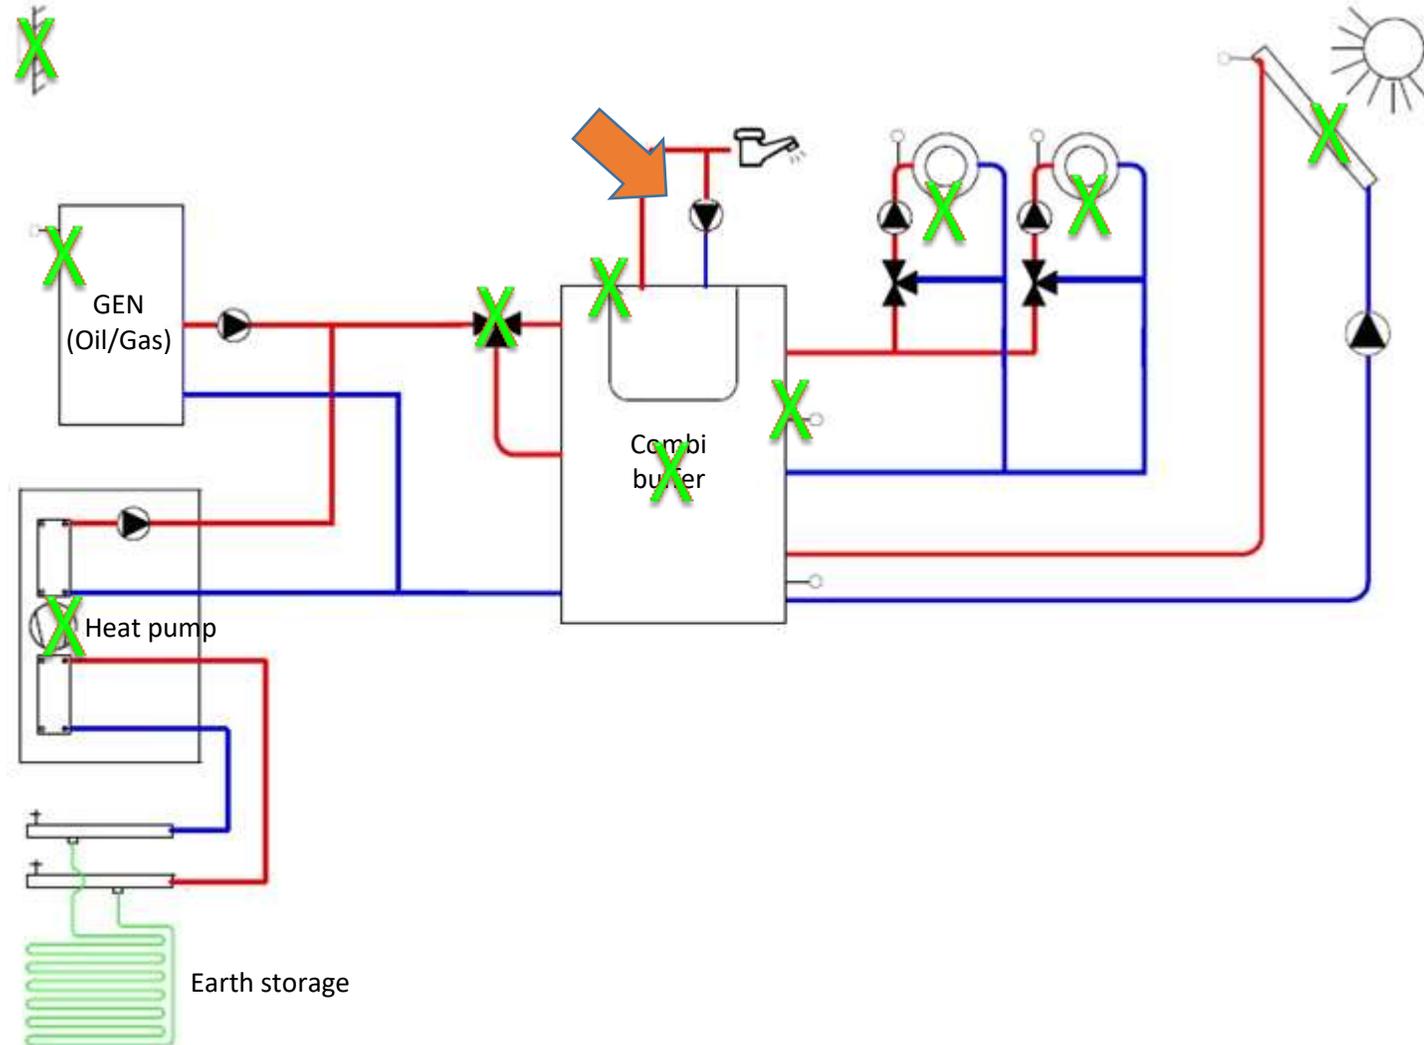

Setup wizard  
DONE

With configuration  
of the circulation pump,  
the boiler pump  
and of the  
PWM signal of the SOP  
continue

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Config menu  
Function  
Hot water  
Circulation pump  
A4:ARS

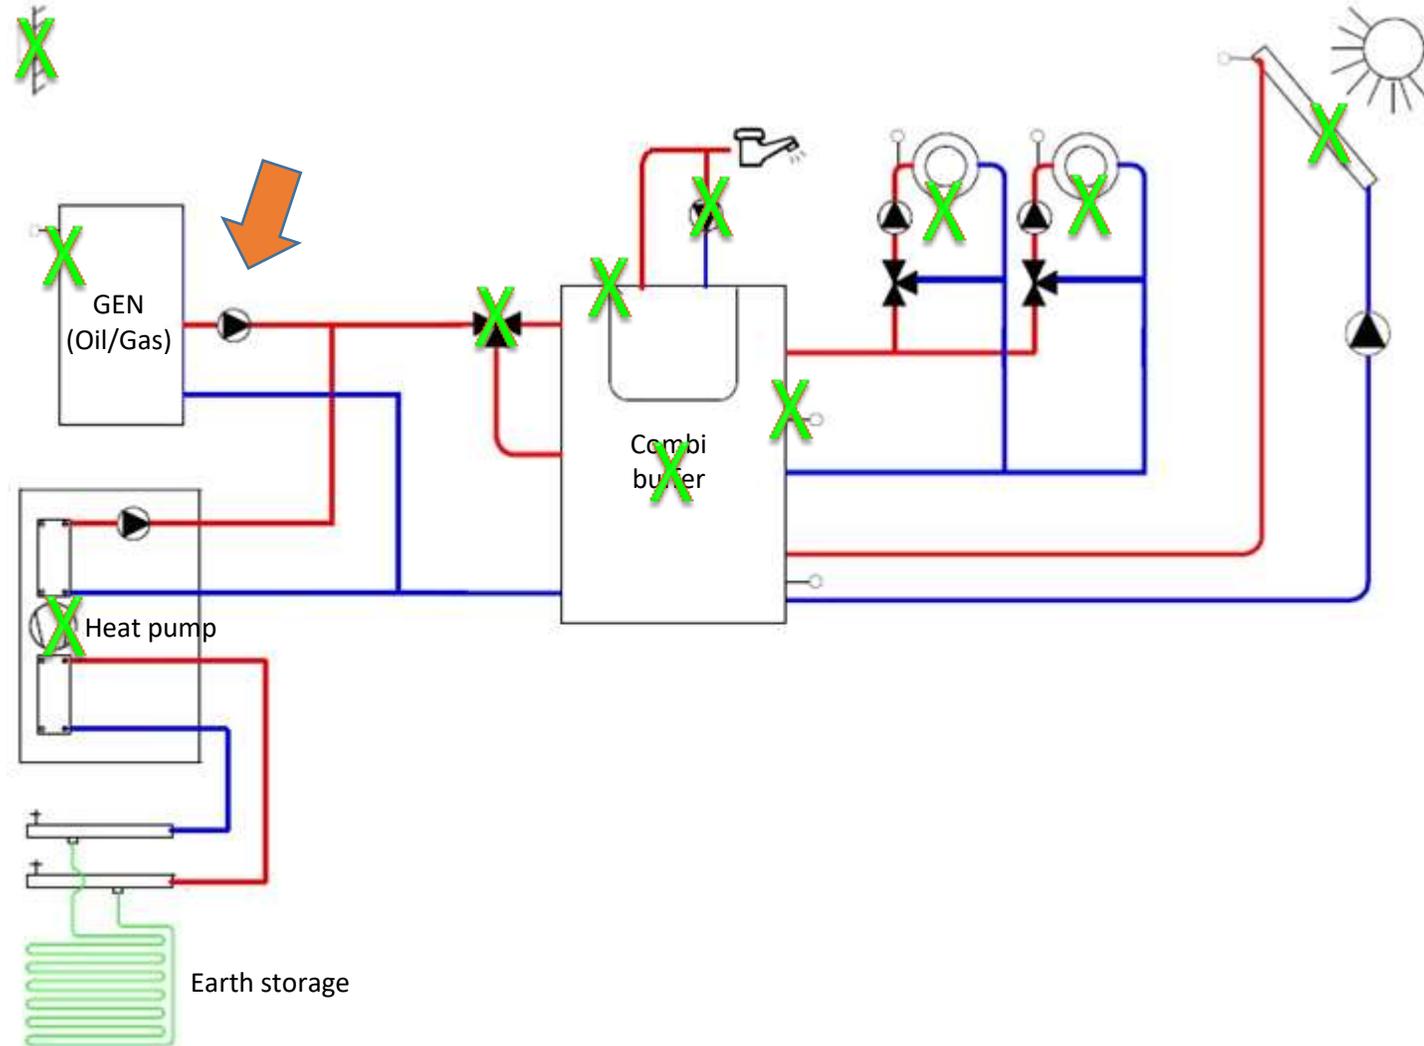

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Config menu  
Function  
Energy generator 1  
Pump relay (boiler pump)  
A3:ARSP

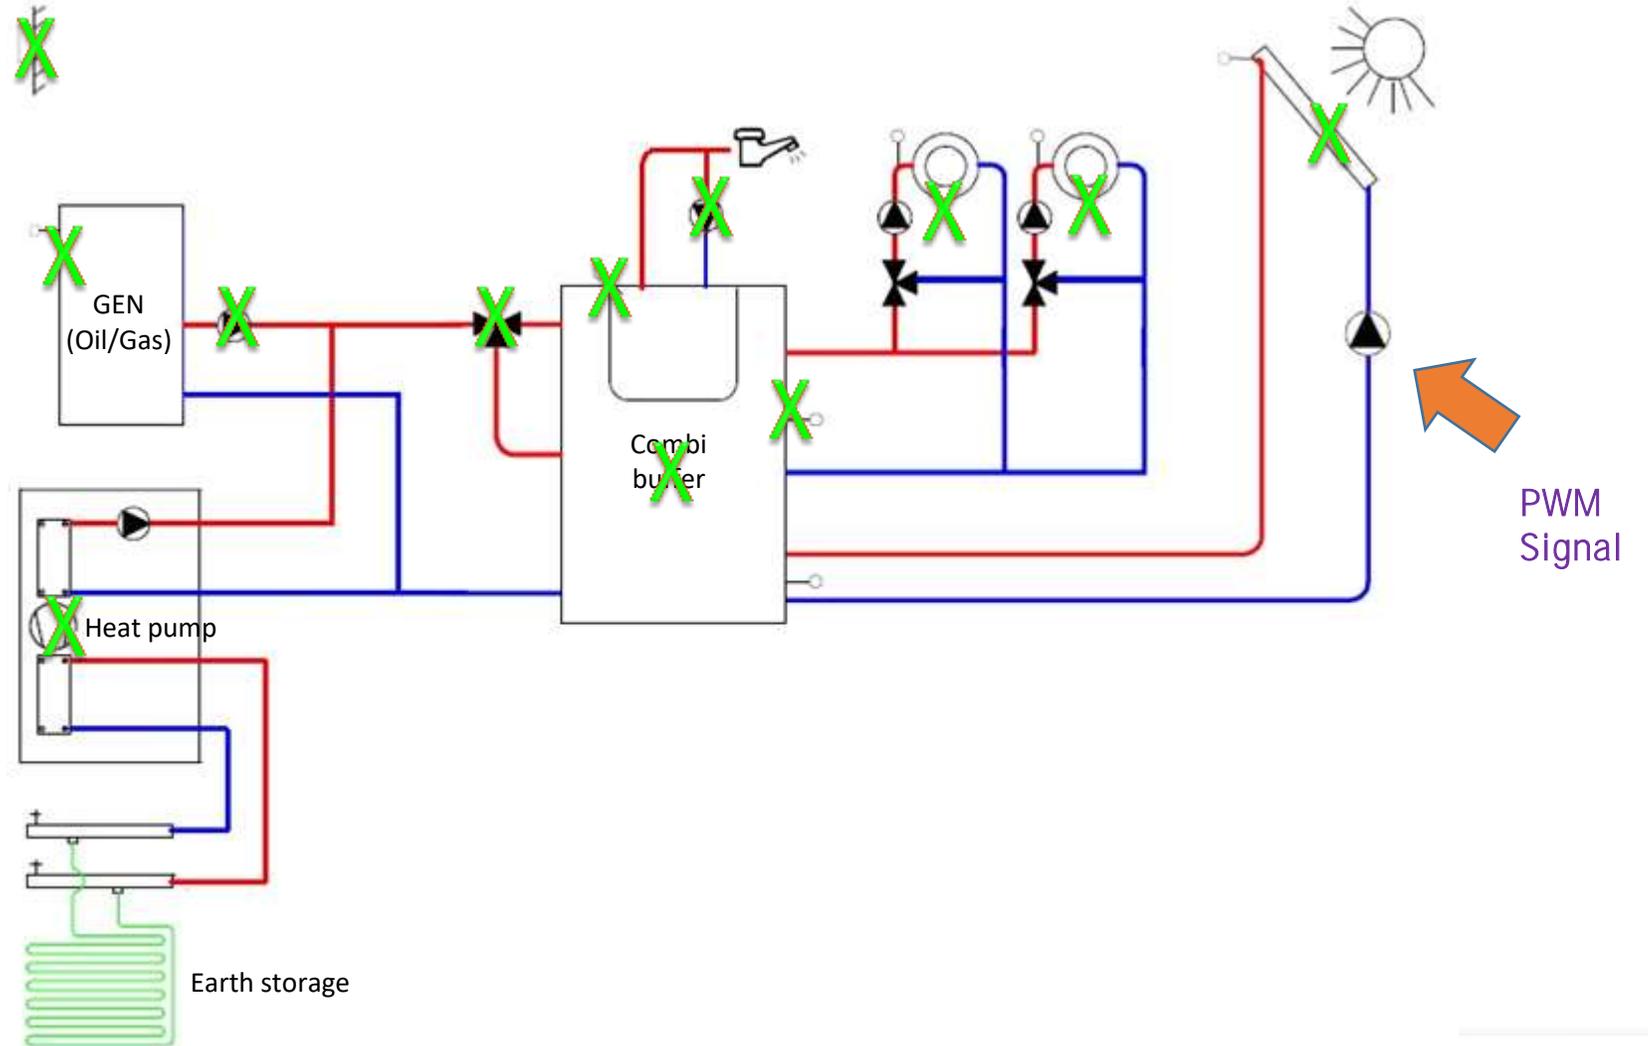

The boiler pump will in this case  
on the last free  
Output laid. The  
connection is potential-free.  
At connection A3-1 is on-site  
put on the phase during  
from A3-2 the control  
of the boiler pump takes place.

**ATTENTION!**  
**Not with WG 1000.**

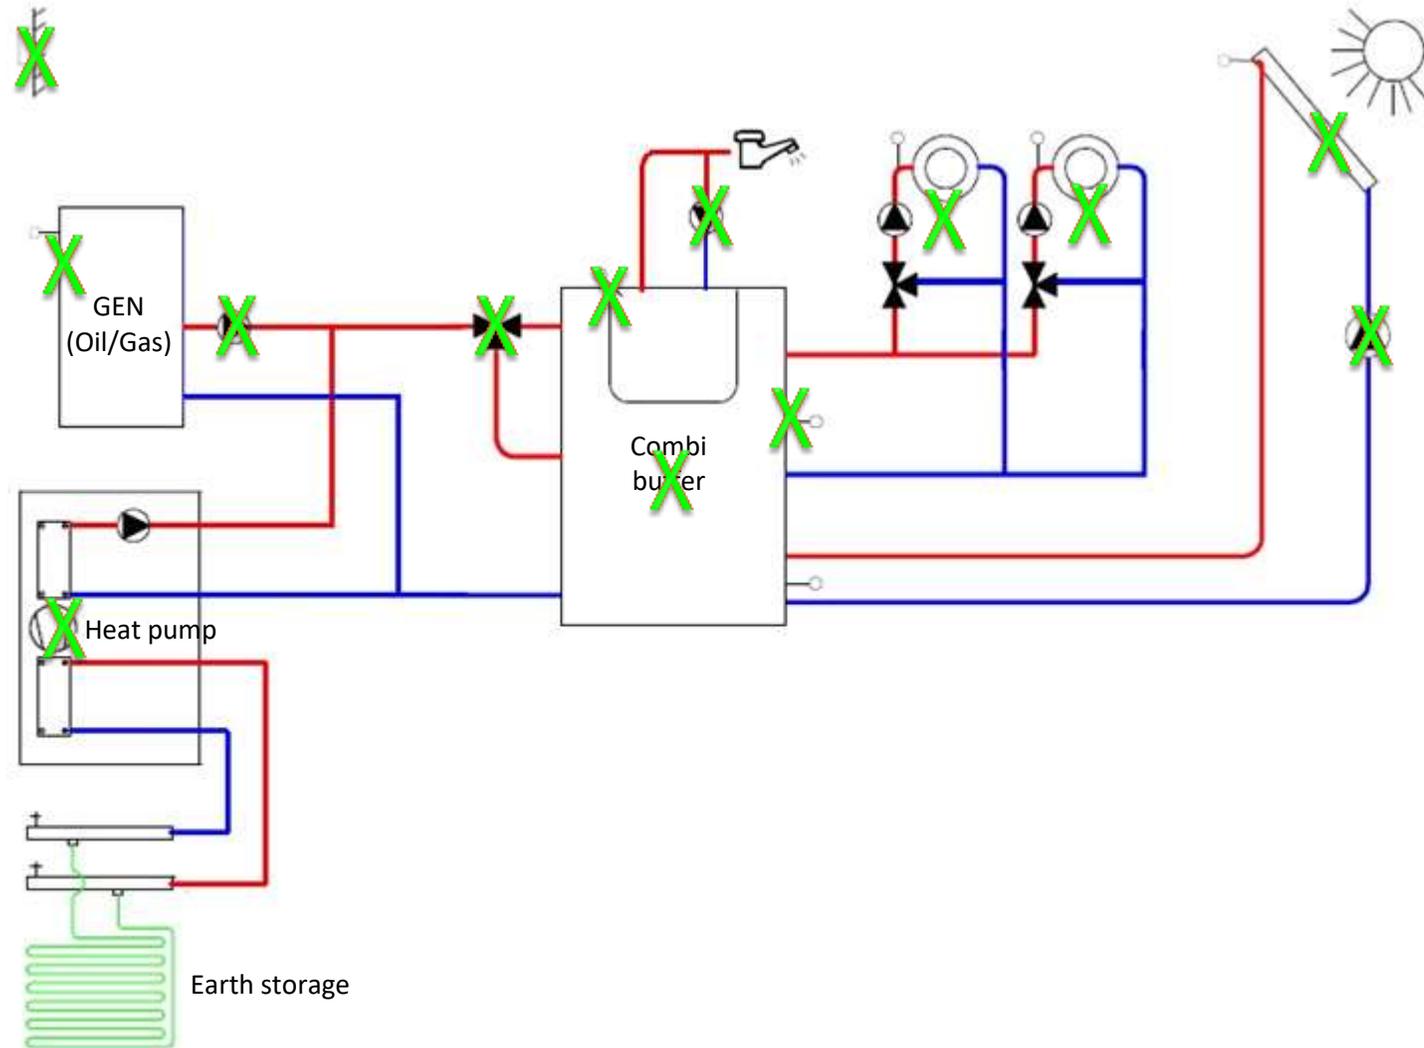

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

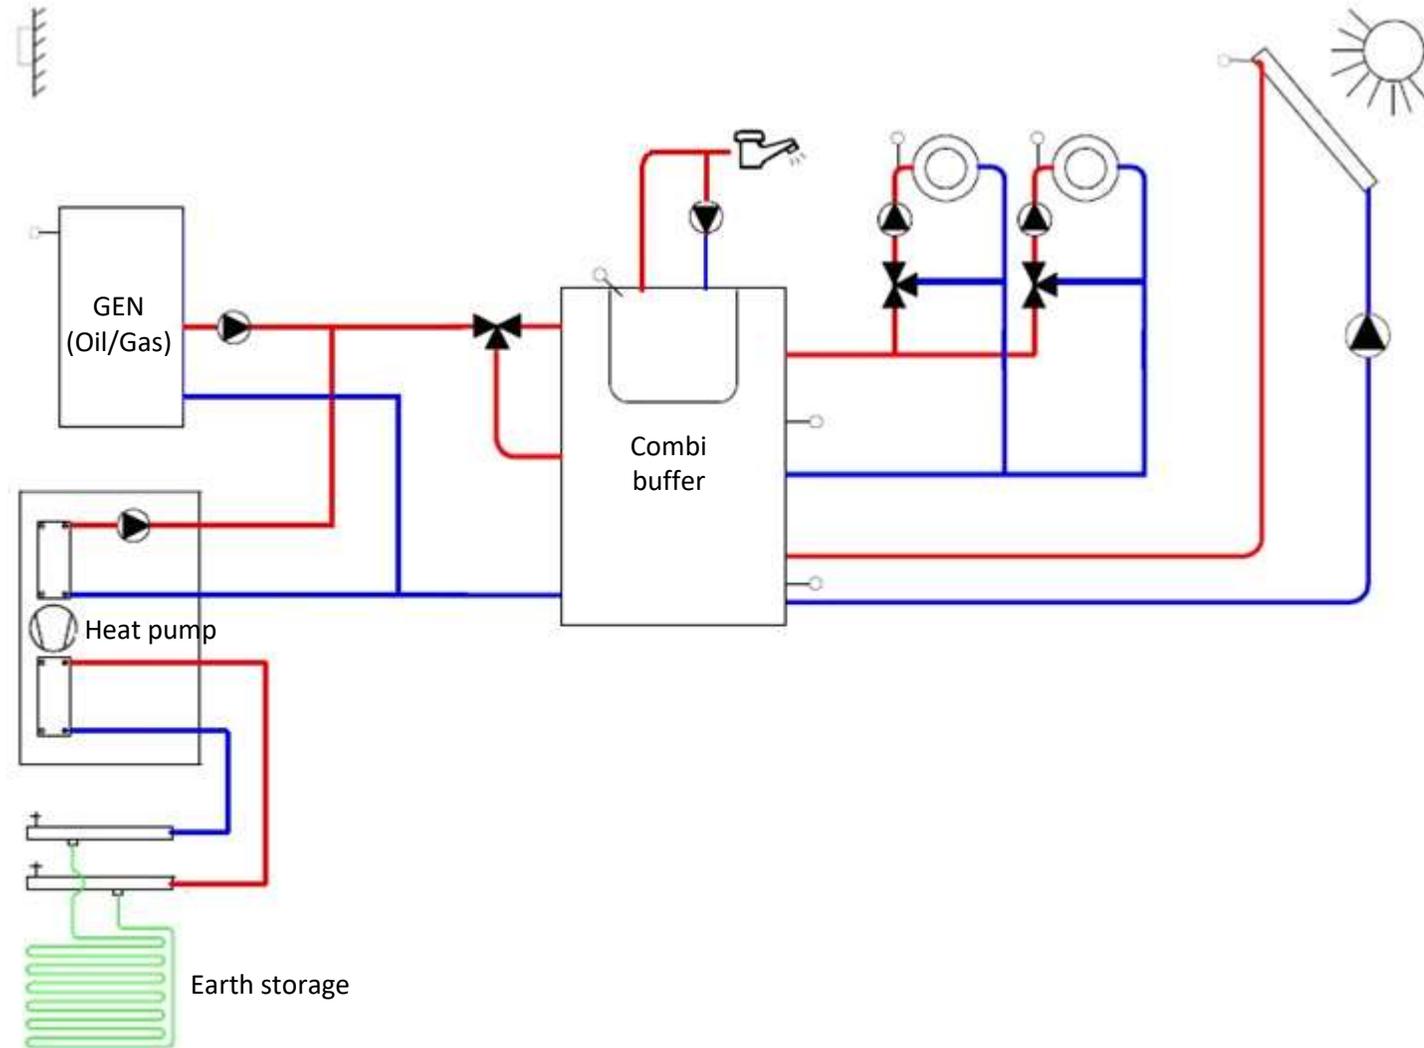

Config menu  
Ready

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

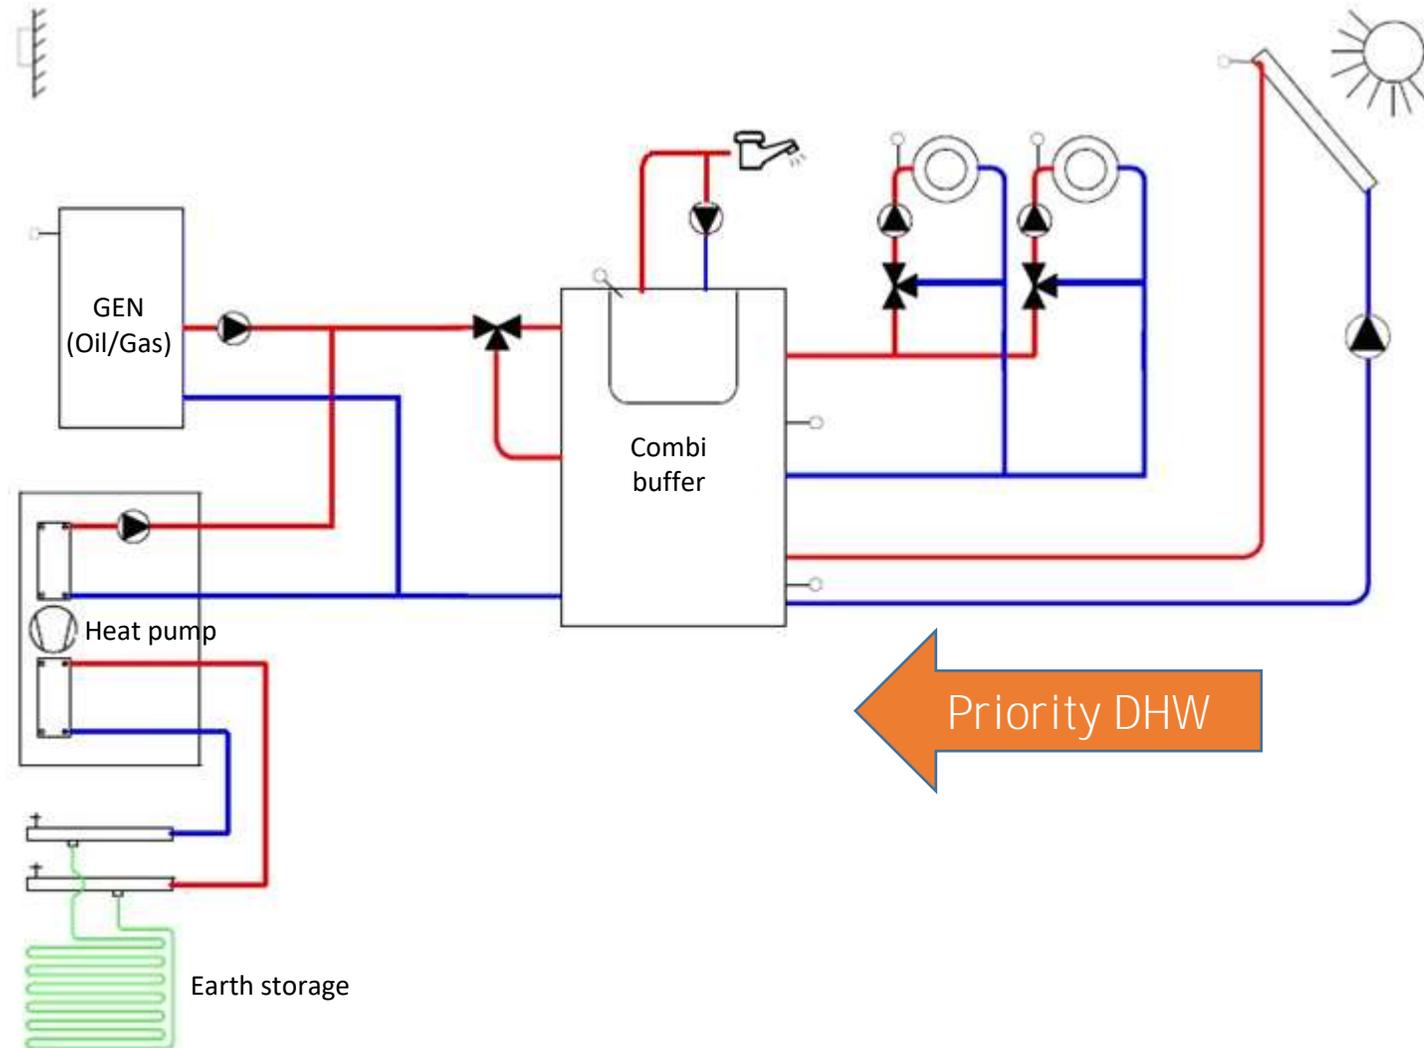

More features  
(Regulatory)  
are available in the  
individual menus:  
e.g.:  
Solar operating mode  
Summer/winter lock

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Solar menu  
Basic setting  
Operating mode  
**Hot water priority**

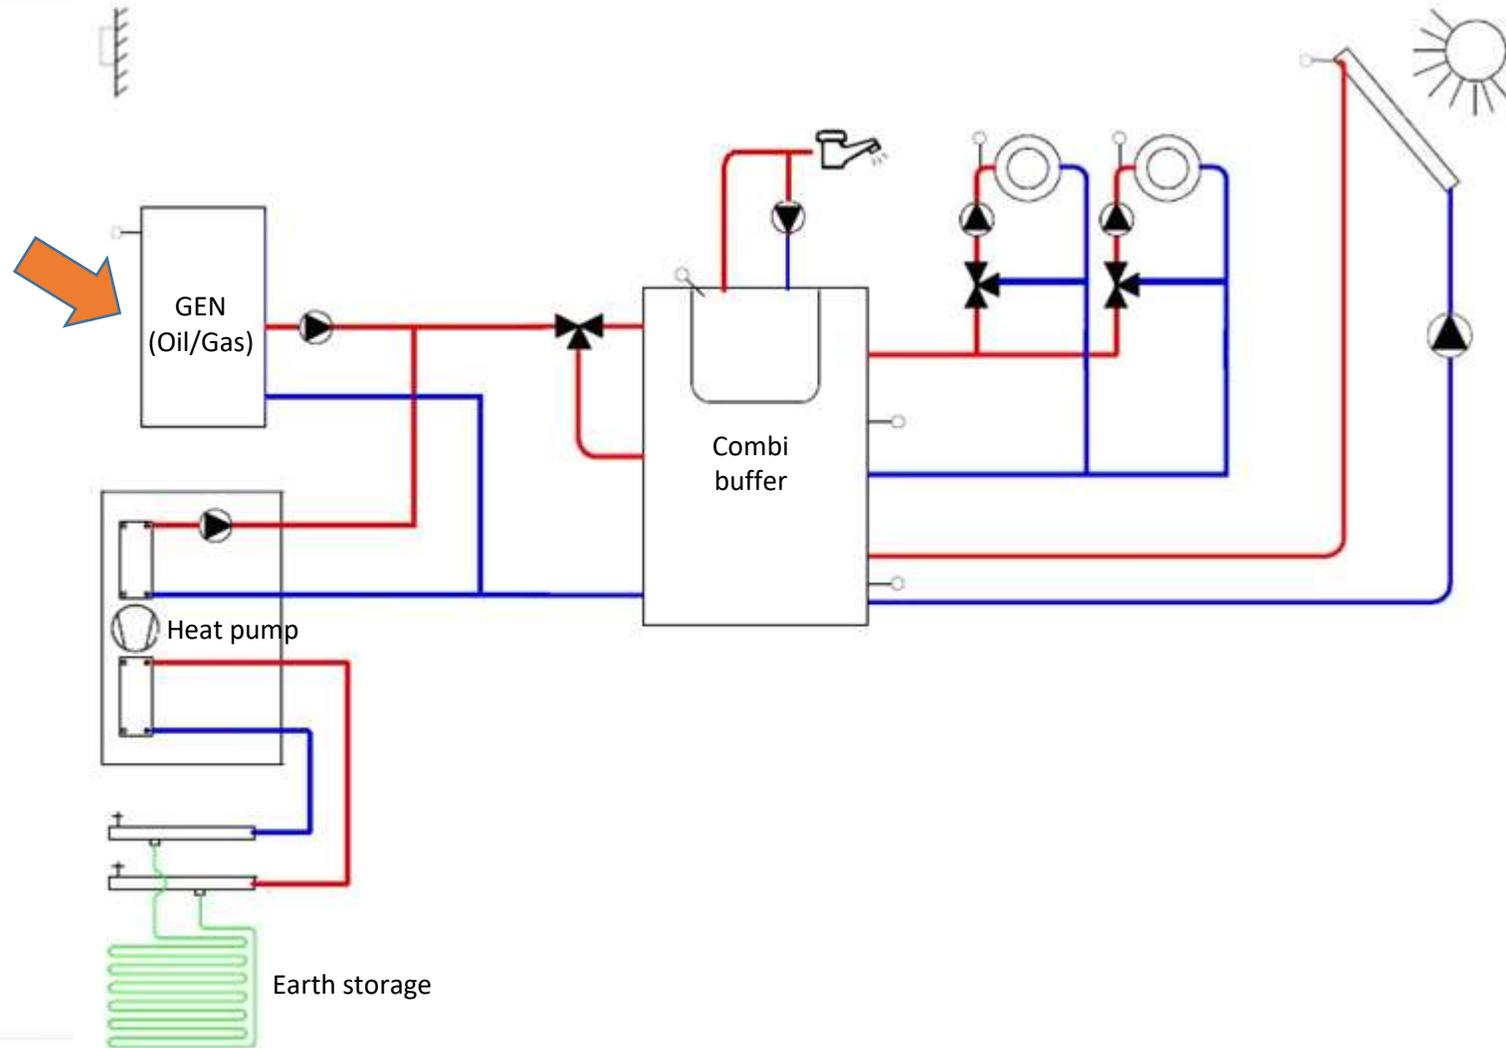

Through this operating mode one is prevented first, that a parallel operation of the hot water tank of solar and GEN takes place. A release of the GEN takes place only after an adjustable temperature undershoot and adjustable cycle (time) lock.

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Summer lock  
(GEN oil/gas)

Energy generator 1 menu  
Basic setting  
Summer lock  
e.g. 2°C

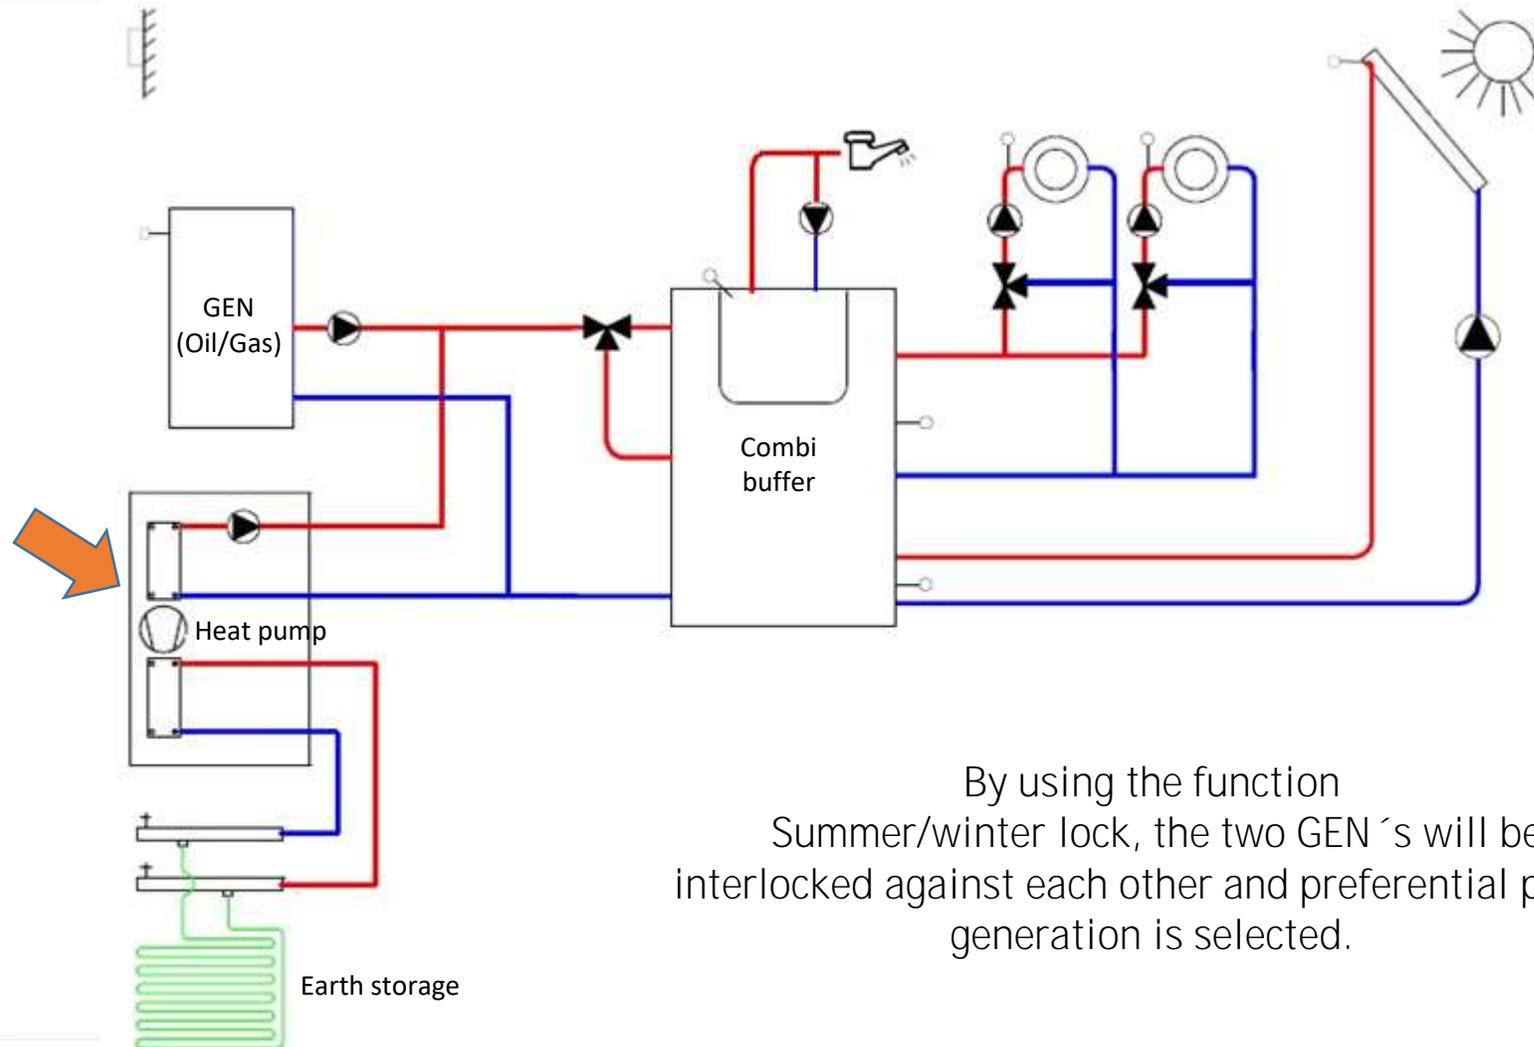

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

Winter lock  
(Heat pump)

Energy generator 2 menu  
Basic setting  
Winter lock  
e.g. 0°C

Notice!

For a seamless  
switching, the  
Winter lock 2K lower  
be set as the  
Summer lock.

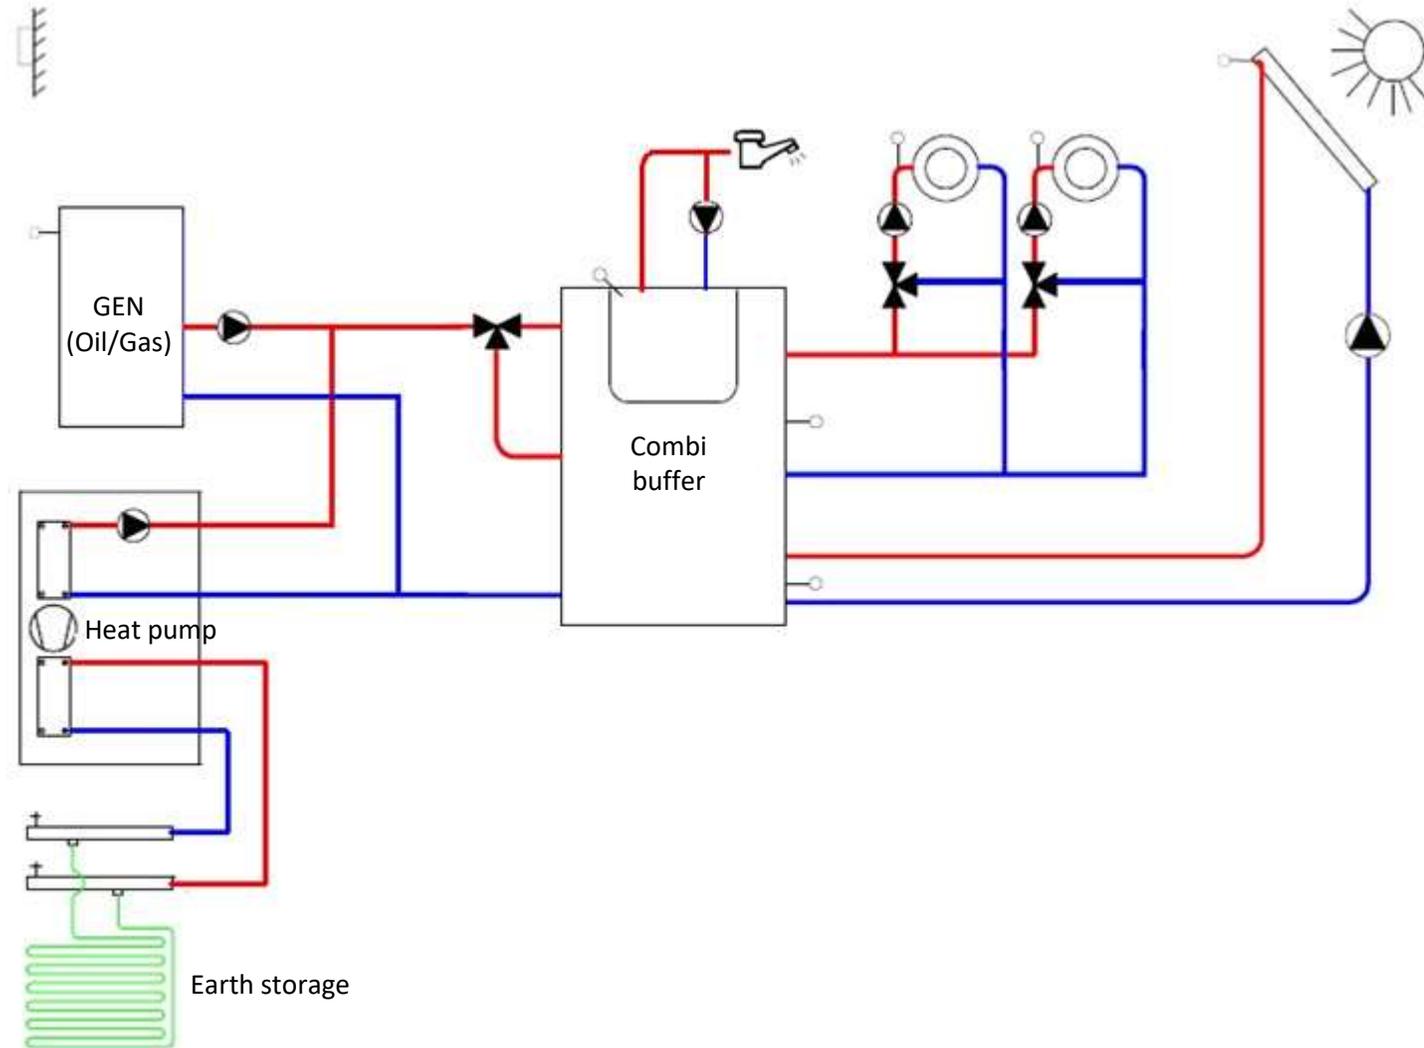

By using the function  
Summer/winter lock, the two GEN's will be  
interlocked against each other and preferential power  
generation is selected.

# heatcon! EC hybrid system, 2x MC, combi buffer, solar

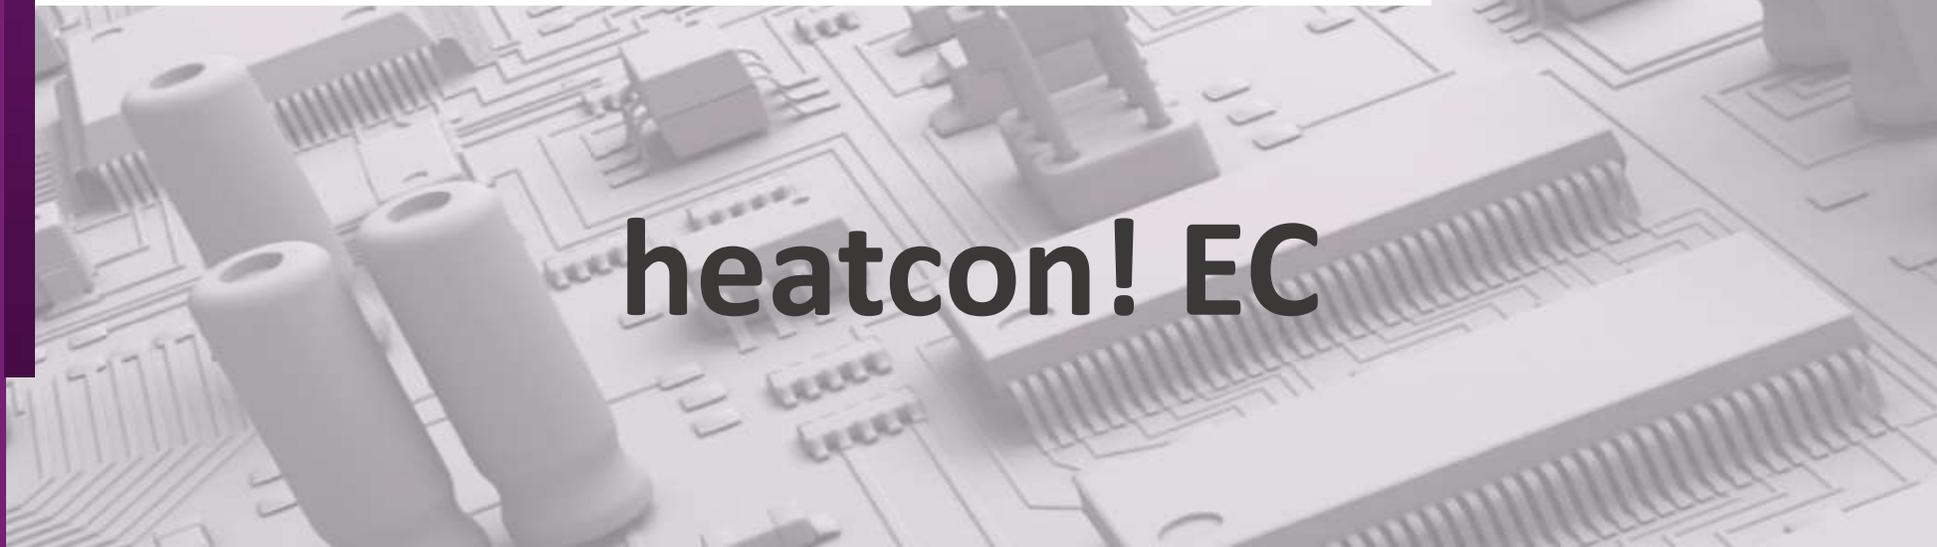

Ready

Now further  
Plant-specific  
or customised  
Settings in the individual  
menus can be made:  
e.g.:  
Min. / Max. limits  
Switching times  
Room setpoint temperatures  
etc.
